- Learning the dynamic effects of international trade and factor movement on growth, convergence and income distribution at
    global level.

DESCRIPTION OF CONTENTS: PROGRAMME

This is a post-graduate course that offer a long run view on the dynamic effects of international trade and factor movement on growth, convergence and income distribution at global level. It´s required just some basic knowledge of statistics, international and financial economy. We will use and stylize narrative about the international economic history from 1820 to understand today world international economy problems. We will debate on one hand, trade effects on growth, economic divergence and income distribution, on the other hand, the different alternatives on commercial and monetary models. The historical narrative follows the long 19th century, interwar and the post war characterized as integration, disintegration and reintegration periods. On this context it will be study the interrelation between technology, institutions and geography along the globalization process at the same time that we analyses the convergence and divergence between rich and poor countries and domestic income distribution.

1)   Introduction: ¿Why are we interested on Globalization growth and inequality?
2)   The origins of the great divergence: convergence and global inequality in the long run
3)   The first wave of globalization : trade and growth.
4)   The international monetary system, migrations and capital movements
5)   Globalization trade policy and Empire .
6)   Disintegration of the international economy and the World in Depression .
7)   Openess, growth and Institutions from 1950 to the present.
8)   Globalization and Inequality from 1950 to the present

LEARNING ACTIVITIES AND METHODOLOGY

- Adquisition of theoretical and historical knowledge in the master lectures will develop some theorethical knowledge aplayed to the history of globalization. Lectures notes and execercise will develop a colection of material to be studied and discussed critically before the lectures. They will have the reference bibliography and complementary literature in the programe.

- Reading is important in this course, articles should be read before the general lecture take place, because they are related with the discussion and students will be asked for comments about it. Reading list is long because one of the goals of the course is to develop skills to read.

- Final essay: you should write a short essay about 6.000 to 8.000 words in a team of three co-authors (preferably). The essays will be discussed and presented in public the last week of the course, to receive feedback from the audience (40% final mark (70% essay -30% presentation).

ASSESSMENT SYSTEM

% end-of-term-examination/test:	40
% of continuous assessment (assigments, laboratory, practicals…):	60

- You should read every week and we will debate about every reading signed on two specific sessions marked in the Syllabus chronogram.
 (20% of the final mark).

- Final essay: you should write a short essay about 6.000 to 8.000 words in a team of three co-authors (preferably). Editorial norms will be those of a standard academic journal in the economy area. The objective will be to present an academic debate offering a relevant good question related with an international economy present day problem on growth, income distribution, monetary, trade policy, migration etc, inspired on the curse topics. First step is to find an attractive topic and a relevant question. You should make a previous consult with the professor to select topic and question. That¿s should be done as early as possible in the second week of the course, with a proposal of the topic, question and three coauthors name.
 The essays will be discussed and presented in public the last week of the course, to receive feedback from the audience
 (40% final mark (70% essay -30% presentation)).

- A Final test on the material discussed on the lectures and the papers read. (40% final mark).
