Advanced Aeroelasticity

Academic Year: (2018 / 2019) **Review date: 19-03-2018**

Department assigned to the subject: Bioengineering and Aeroespace Engineering Department

Coordinating teacher: FAJARDO PEÑA, PABLO

Type: Compulsory ECTS Credits : 3.0

Year : 1 Semester : 2

REQUIREMENTS (SUBJECTS THAT ARE ASSUMED TO BE KNOWN)

A basic knowledge of aeroelastic phenomena

OBJECTIVES

Good knowledge of the different aeroelastic phenomena and dynamics loads, with special emphasis on their computation using aeroelastic codes as MSC NASTRAN

DESCRIPTION OF CONTENTS: PROGRAMME

1. Advanced Aeroelasticity. Getting Started.
2. Environmental Vibration
3. Powerplant Dynamics
4. Impacts
5. Getting started with MSC.NASTRAN
6. Normal Modes
7. 3D unsteady aerodynamics: DLM
8. Static Aeroelasticity. Trim Solution. Control Surface Effectiveness.
9. Flutter
10. Dynamic Landing
11. Discrete Tuned Gust (DTG)
12. Continuous Turbulence (CT)

LEARNING ACTIVITIES AND METHODOLOGY

Theory sessions.
Lab-sessions with computational aeroelasticity software.

ASSESSMENT SYSTEM

End-of-term exam (25%)
Assignments, Quiz (75%)

In order to pass the subject, two requirements need to be met:

1) to have a MINIMUM mark of 4.0 in the end-of-term exam and the quizzes
2) to have a minimum overall mark of 5.0/10 (weighing 25% the end-of-term exam mark and 75% the mark of the continuous evaluation).

% end-of-term-examination:	25
% of continuous assessment (assigments, laboratory, practicals…):	75
