

Academic Year: (2018 / 2019)

Review date: 04-02-2019

Department assigned to the subject: Social Sciences Department

Coordinating teacher: VIÑAS CHIAPPINI, VERONICA ESTHER

Type: Compulsory ECTS Credits : 6.0

Year : 3 Semester : 1

REQUIREMENTS (SUBJECTS THAT ARE ASSUMED TO BE KNOWN)

Public Policy and Governance I

OBJECTIVES

The subject has as main objectives: (i) To introduce the student to the theoretical bases and practice of public policy analysis. (ii) To prepare the student to be able to implement the approach and tools for the analysis of public policies to specific cases. (iii) To generate a critical spirit of analysis enabling the student to assess the importance of the knowledge on social and economic local, regional, national and international political contexts. (iv) To provide the students learning and research instruments to provide them with greater autonomy.

It is a combination of training objectives, which enable students to develop skills of analysis, relationship, application and critical judgement; and professional objectives, involving the achievement of skills and specific behaviors for the future professional practice.

On the other hand, the subject develops the following specific competences: (i) To develop capabilities to plan, implement, evaluate and analyze public policies. (ii) To know the phases of public policies and to identify the scope of decision making, as well as alternatives for the achievement of political objectives. (iii) To know the theoretical proposals about the analysis of public policies. (iv) To understand the processes of political decision-making and public targets. (v) To understand the strategies and programs of action for the implementation of public policies. (vi) To understand how and why an evaluation of a public intervention is carried out. (vii) To understand the importance of the mobilization and coordination of resources, agents and networks for the implementation of policies. (viii) To know the main theoretical contributions on actors and networks of actors. (ix) To identify the main actors carrying out activities within the system. Understand the behavior and the interaction between the actors in the system and its environment.

DESCRIPTION OF CONTENTS: PROGRAMME**1. Public policy and public policy analysis.**

Concept of public policy. Politics and public policy. Emergence and consolidation of policy studies. Classification of public policies. Comparing public policies as a method of analysis. Process and cycle of public policies. The relationship between the cycle of policy and its analysis.

2. The definition of the problems.

Construction of problems. From issues to public problems. The importance of defining problems. Frame Analysis.

3. The construction of the agenda and decision-making.

Public attention. The public agenda, the media agenda and the political agenda. The formation of the public agenda and the government agenda. The dynamics of the political agenda. Multiple streams Framework. Decisional models applied to public performances.

4. The implementation of public policies.

Perspectives on the implementation of public policies: Up-down analysis and bottom-up analysis. The management of the commons. Institutional Rational Choice.

5. The evaluation of public policies and programmes.

The emergence of evaluation of public policies and programmes and its current situation. Types of evaluation. Evaluation, feedback and reprogramming. Politics and policy evaluation.

6. Actors of public policies and institutions.

The classical approaches to the actors. Public policy networks. Bureaucracy, political parties and other actors. Institutions and institutionalization process. Impact of institutions on public policies.

7. The importance of ideas in public action.

Ideas in politics. Public policies and change. Logic and rationalization of public policies. The Advocacy Coalition Framework.

8. Termination and change of public policies.

Types of change. Effects and causes of change. Punctuated-Equilibrium Framework. Dissemination of public policies.

LEARNING ACTIVITIES AND METHODOLOGY

In order to achieve the objectives of the course, it is divided into a part of classroom teaching hours work and another part of individual work outside the classroom. Classroom time is divided between theoretical classes and practices.

In the theoretical classes the topics of the programme will be presented, developing their essential points. For better use of the theoretical classes the student must read, understand and study, at least, the compulsory readings of each topic. Another additional bibliography for the subject in general and for each particular topic will be available.

The practical part of the course is divided into two:

A. First, not assessable exercises done in class, on the basis of consultation of web pages, readings texts and newspaper articles related to policies, programmes and services. These practical exercises allow students to determine whether they have understood and assimilated the theory, and ask new questions that had not come to him during the theoretical explanation. Also they help to connect the contents of the subject with the current reality.

B. Complementarily, student will make 2 or 3 valuable practices throughout the course.

A schedule of tutorials will be established for consultations and individual questions.

ASSESSMENT SYSTEM

The procedure of evaluation of the subject is a mixed system that combines continuous assessment throughout the semester with the required completion of an theoretical exam. It allow to determine the level of learning of the student throughout the course.

Written final exam will be used for checking the level of acquired knowledge and the capacity for reflection, analysis and use of the appropriate terminology. 60% Of the note of the subject must be determined with it. The student will need to get at least five points in the theoretical exam to pass the course.

The practical part of the course will be evaluated by the practical exercises (which represent 30 of the final grade of the course), already explained in the previous section.

Class attendance on a continuous basis will represent 10% of the final grade.

On the other hand, as the university educational process consists of a teaching and active learning, based on the idea that students learn listening to and watching, but also working with different materials, discussing with the Professor and other students, asking, reflecting, etc., the active participation of the student in the theoretical and practical classes, and the participation in the discussions, questions and critical reflections will be positively valued.

% end-of-term-examination:	60
% of continuous assessment (assignments, laboratory, practicals...):	40
