

Academic Year: (2018 / 2019)

Review date: 04-06-2018

Department assigned to the subject: Department of Bioengineering and Aerospace Engineering

Coordinating teacher: MERINO MARTINEZ, MARIO

Type: Compulsory ECTS Credits : 6.0

Year : 4 Semester : 2

COMPETENCES AND SKILLS THAT WILL BE ACQUIRED AND LEARNING RESULTS.

Formulate and solve orbital mechanics problems, use that knowledge to perform preliminary designs of space missions, and evaluate the capabilities of different spacecraft and space systems.

Competences: CG9, CG10, CB2, CB5, CECRA13.

DESCRIPTION OF CONTENTS: PROGRAMME

1. Two body problem
 - Conservation laws
 - Conics and orbital elements
2. Kepler's equation
 - Formulation for the elliptic, parabolic, hyperbolic cases
 - Numerical solution
3. Orbital maneuvers
 - Fundamentals of spherical trigonometry
 - Hohmann, bielliptic transfers; plane change; phasing maneuvers, electric orbit raising
4. Preliminary orbit determination
 - Gibbs problem, Gauss problem
 - Lambert's problem
 - Porkchop diagrams
5. Perturbations
 - Special perturbation methods
 - General perturbation methods
 - Drag, solar radiation, third body
 - Geopotential and spherical harmonics
6. Interplanetary trajectories
 - Patched-conics method
 - B-Plane targeting
7. Relative motion and rendezvous
 - Clohessy-Wiltshire equations
8. Restricted three body problem
 - Derivation and normalization. Jacobi's energy integral
 - Lagrange libration points
 - Stability and trajectories near Lagrange points
9. Space vehicles: attitude dynamics
 - Quaternions. Free body attitude dynamics
 - Gravity gradient
10. Introduction to space missions and space systems
 - Application orbits, types of missions
 - Spacecraft subsystems

LEARNING ACTIVITIES AND METHODOLOGY

- Theory sessions in master classes
- Problem sessions in reduced groups
- Computer sessions with mathematical software
- Personal and group work

ASSESSMENT SYSTEM

- End-of-term exam (60%)
- Continuous evaluation (40%)

In order to pass the subject, two requirements need to be met:

- 1) to have a MINIMUM mark of 4.0/10 in the end-of-term exam;
- 2) to have a minimum overall mark of 5.0/10 (weighing 60% the end-of-term exam mark and 40% the mark of the continuous evaluation).

% end-of-term-examination:	60
% of continuous assessment (assignments, laboratory, practicals...):	40
