

Academic Year: ( 2019 / 2020 )

Review date: 10-10-2019

Department assigned to the subject: Department of Signal and Communications Theory

Coordinating teacher: ARTES RODRIGUEZ, ANTONIO

Type: Compulsory ECTS Credits : 6.0

Year : 2 Semester : 1

**COMPETENCES AND SKILLS THAT WILL BE ACQUIRED AND LEARNING RESULTS.**

The student must acquire the following competences:

- Capacity to integrate technologies and systems from Telecommunication Engineering in general applications, and in wide and multidisciplinary fields.

**DESCRIPTION OF CONTENTS: PROGRAMME**

ICT applications in specific markets and sectors, considering non-exclusively the following sectors:

- Health
- Smart cities
- Defence and security
- Electromagnetic compatibility
- Intelligent and decision support systems
- Voice, audio, image and video in mobile and internet services

**LEARNING ACTIVITIES AND METHODOLOGY**

Learning activities include:

- Theoretical class, small group discussions and group tutoring, student presentations, individual tutoring and individual student's work, that includes study, tests and exams oriented toward the acquisition of theoretical knowledge.

**ASSESSMENT SYSTEM**

The assessment will evaluate the degree of fulfilment of the learning objectives from student's work, both individual and collectively. The continuous assessment of student's activities will be carried out from test and exams, practical exercises and other academic activities.

The final grade will consider both the group and individual activities. The final exam will determine 60% of the total course grade, the rest being determined by the continuous assessment.

**% end-of-term-examination:** 60

**% of continuous assessment (assignments, laboratory, practicals...):** 40
