

Risk Management

Academic Year: (2019 / 2020)

Review date: 28-04-2020

Department assigned to the subject: Department of Business Administration

Coordinating teacher: MAYORAL BLAYA, SILVIA

Type: Compulsory ECTS Credits : 3.0

Year : 1 Semester : 2

STUDENTS ARE EXPECTED TO HAVE COMPLETED

Students should have passed Derivatives, Financial Markets and Fixed Income courses.

Professor:

Esther Caceres, FRM (ALM Supervisor en Mirai Advisory)

COMPETENCES AND SKILLS THAT WILL BE ACQUIRED AND LEARNING RESULTS.

This course introduces the different types of risk financial entities face, with a special focus on market and liquidity risks, and the guidelines that they follow to properly manage them.

Students will learn different hedging techniques and assess the market risk of a portfolio with the traditional measures used in the industry (Value at Risk and Expected Shortfall), understanding their differences and limitations and testing their accuracy through backtesting analysis.

In addition to managing the risk of a portfolio, the course provides an overview of how the structural risk is managed in financial entities, focusing on liquidity risk metrics (survival horizon, maturity gap) and interest rate risk metrics (repricing gap, market value of equity, net interest margin, duration gap).

Finally and given the increasingly important role of regulators in the banking industry, the course summarizes the current European regulatory framework: players and requirements related to both liquidity and interest rate risks.

DESCRIPTION OF CONTENTS: PROGRAMME

1. Foundations of Risk Management
 - Definition of risk
 - Types of risk
 - Enterprise Risk Management (ERM)
 - Measuring risk
 - The risk management process
 - The risk manager's role
 - Risk management failures
2. Hedging risks
 - Introduction to hedging
 - Unitary hedging
 - Optimal hedging
 - Hedging derivatives ¿ The greeks
3. Value at Risk I
 - Definition
 - Methodologies
 - Limitations
4. Value at Risk II
 - Coherent risk measures
 - Expected Shortfall
 - Stress testing and scenario análisis
 - Backtesting
5. Liquidity risk
 - Definition
 - Types of liquidity risk
 - Asset liquidity risk
 - Liquidity VaR

- Introduction to funding liquidity risk
- 6. Asset and Liability Management I
 - Introduction to ALM
 - Managing funding liquidity risk
 - Managing interest rate risk
- 7. Asset and Liability Management II
 - Regulatory framework
 - Liquidity risk ζ Basel Accords
 - Interest rate risk ζ IRRBB

LEARNING ACTIVITIES AND METHODOLOGY

Theoretical concepts will be presented using slides that will be available before each lecture.

To be consistent with GARP rules for the FRM exams, students must demonstrate their ability to solve problems and exercises by using just a calculator in both the mid-term and the final exam. In addition, students will solve two different assignments in Excel in which they will have to calculate some risk metrics of a portfolio of assets (VaR, ES ζ) using real data.

ASSESSMENT SYSTEM

The grade will be based on a closed-book final exam (50%) and on coursework (50%). To pass the course, students must hand in the coursework and get a minimum grade of 4 out of 10 in the final exam, which will have a duration of 2 hours.

- % end-of-term-examination: 50
- % continuous assessment (two assignments): 50

Students that do not meet the minimum passing grade should retake the subject. If the resit is taken, the above grade criteria also apply

% end-of-term-examination:	50
% of continuous assessment (assignments, laboratory, practicals...):	50
