

Academic Year: (2019 / 2020)

Review date: 23-04-2020

Department assigned to the subject: Statistics Department

Coordinating teacher: DURBAN REGUERA, MARIA LUZ

Type: Electives ECTS Credits : 3.0

Year : 1 Semester : 2

REQUIREMENTS (SUBJECTS THAT ARE ASSUMED TO BE KNOWN)

Probability
 Statistical Inference
 Programming in R
 Regression Models

OBJECTIVES

CG1 Ability to apply analysis techniques with the aim to adapt the information to real problems.

CG2 Ability to identify the best stochastic model for each real problem, and to apply it for its analysis, design and solution.

CE5 Apply advanced statistical foundation for the development and analysis of real problems that include the prediction of a response variable.

KNOWLEDGE ACQUISITION

- 1) Clinical Trials
- 2) Survival analysis
- 3) Models for longitudinal data and repeated measurements

DESCRIPTION OF CONTENTS: PROGRAMME**1 Clinical Trials Data Analysis**

- 1.1 Basic concepts
- 1.2 Treatment comparisons
- 1.3 Meta-analysis

2 Survival analysis

- 2.1 Basic concepts
- 2.2 Descriptive methods for survival data
- 2.3 Regression models for survival data

3 Models for longitudinal data and repeated measurements

- 3.1 Hierarchical data
- 3.2 Models with random intercept and slope
- 3.3 Generalized Estimating equations

LEARNING ACTIVITIES AND METHODOLOGY

Learning activities:

Master classes
 Exercises
 Computer labs
 Projects

Teaching methodologies:

Presentations of the professor in class with computing and visual media, where the professor develops the main concepts of the subject and provides bibliography supplementing the knowledge of students.
 Critical reading

ASSESSMENT SYSTEM

- SE1 Participation in class 10%
- SE2 Assignments done during the course 90%

% end-of-term-examination:	0
% of continuous assessment (assignments, laboratory, practicals...):	100
