Wind and photovoltaic generation

Academic Year: (2019/2020)

Review date: 12-04-2019

Department assigned to the subject: Electrical Engineering Department

Coordinating teacher: CHINCHILLA SANCHEZ, MONICA

Type: Electives ECTS Credits : 6.0

Year : 4 Semester :

REQUIREMENTS (SUBJECTS THAT ARE ASSUMED TO BE KNOWN)

Electric Engineering Fundamentals

OBJECTIVES

The student must be able to:

- select and analyze so wind energy isolated systems as photovoltaic autonomous systems.

- also the student will learn both grid connected systems.

The student will be able to make a project related to those areas: he will make the component selection, use of catalogs and technical documentation.

DESCRIPTION OF CONTENTS: PROGRAMME

MODULE 1. SUSTAINABILITY

- 1.1-Introduction. Sustainability.
- 1.2-RREE. Summary by technologies.
- 1.3- Energy efficiency

1.4-Energy from the sea.

MODULE 2. WIND POWER

WIND 1. Wind Energy. Current status and resources.

1.1- Current status of wind power around the world

- 1.2- Wind resource. Factors affecting wind production.
- 1.3-Models of assessing wind potential in a wind site.Atlas IDAE.

WIND 2. Energy Production

2.1- Power curve. Defining FC, HE.

- 2.2- Basic exercise for energy calculation (programs and web Alwin IDAE)
- 2.3- Energy calculation; project focused to a wind generator and site (selected by the student)
- 2.4- Project for a wind park electric energy production.

WIND 3 Wind Technology

3.1- Wind turbine. Types. Components: turbine, tower, hub, generator, gearbox, converter, protections.

- 3.2- Wind turbine. Sizing wind generators.
- 3.3- Wind generators.Miniwind.Wind energy from the sea.
- 3.4- Wind generators. Speed variation associated with the variation of the blade pitch of the turbine.
- 3.5- Energy calculation as a function of wind speed, blade pitch,¿

4. WIND Wind energy systems connected to the grid .

4.1 Evolution of the control systems: fixed speed and speed. Tracking the maximum power point with maximum efficiency at part load. Speed control systems and power at part load and full load.

4.2- Wind farms.Sizing. Network Attached Project wind farm. Using specific software (RETScreen).

4-3. Network integration

- 4.4- Voltage Dips. Stability. Regulations.
- 4.5-Exercise voltage network nodes

5. WIND. Autonomous wind systems.

5.1-Types and functions.

5.2-Windpumps.

5.3- Selection.

WIND 6. Regulation

6.1-Regulation in the field of renewable energies.6.2-Spanish case.

MODULE 3: PHOTOVOLTAIC PV 1-Introduction to solar energy 1.1- Solar energy all over the world 1.2-Resource

PV 2. Basic Technology.2.1- Solar cell. Basic principles and current technology.2.2- Characteristic of the solar cell. Exercises solar cell, cell temperature.

PV 3. Solar panels

3.1- Solar panels.

3.2-Generators electrical characteristic of photovoltaic solar panels. Varying voltage of the photovoltaic panels.

Testing.Characteristic curve with variation of irradiance and cell temperature.

3.3 Architectural integration.

3.4 Solar tracking

PV 4-Inverters.

4.1-Types and functions. Performance.

4.2-Regulation

4.3- Tracking the maximum power point of photovoltaic generrador (MPPT)

PV 5- Autonomous photovoltaic systems.

5.1 -Components. Batteries. Charge regulators. Inverters.

5.2- Autonomous photovoltaic systems: and dimensioning schemes.

5.3-Sizing exercises depending on the location and energy requirements.

5.4- Project; complete sizing

PV 6. Photovoltaic Systems PV grid connected.

6.1 Schemes

6.2-Photovoltaic systems connected to the grid. Protections.

6.3-Regulations.

6.4- Sizing with specific software (PVSYST).

PV 7 Net balance.

7.1- Schemes

7.2- Characteristics. Examples

PV 8- Hibryd systems.

8.1-Microgrids with photovoltaic generation, wind and accumulation systems. Types and functions.

8.2- Regulations.

8.3- Dimensioning with specific software (Homer Pro).

LEARNING ACTIVITIES AND METHODOLOGY

- Teacher lessons, doubts resolution classes -in reduced groups-, students presentations, individual mentorship and student work to acquire theoretical concepts (3 ECTS credits).

- Experimental lessons in the Laboratory, exercise classes in reduced groups, students presentations, individual mentorship and student work to acquire experimental concepts (3 ECTS credits).

ASSESSMENT SYSTEM

A continuous assessment based on the completion of several tasks, students participation and tests that value both skills and general knowledge.

FIRST PART (50%)

Exercise with Wind Turbines (2 in 10)

ExAM: Sustainability and Wind (8 of 10). If obtained> 5 Releases matter, but only for the first ordinary session. LAB 1 (obligatory)

PART TWO (50%) PV plant connected to the grid. PVSYST exercise (4 in 10) FV examination (6 of 10). Rating min: 4 points. LAB 2 (obligatory) Test (for up note)

So from 60% continuous assessment, 10% will be evaluated in the laboratoy. 40 %Final exam. Min 4 points (max. 10 points assigned to final exam)

% end-of-term-examination:	40
% of continuous assessment (assigments, laboratory, practicals):	60
