uc3m Universidad Carlos III de Madrid

Control Engineering I

Academic Year: (2019 / 2020) Review date: 01-07-2020

Department assigned to the subject: Systems Engineering and Automation Department

Coordinating teacher: ESCALERA HUESO, ARTURO DE LA

Type: Compulsory ECTS Credits: 6.0

Year: 3 Semester: 2

OBJECTIVES

By the end of this content area, students will be able to have:

- 1. a systematic understanding of the key aspects and concepts of their branch of engineering in control engineering;
- 2. coherent knowledge of their branch of engineering including some at the forefront of the branch in control engineering;
- 3. the ability to apply their knowledge and understanding of control engineering to identify, formulate and solve engineering problems using established methods;
- 4. the ability to apply their knowledge and understanding to develop and realise designs to meet defined and specified requirements;
- 5. an understanding of design methodologies, and an ability to use them.
- 6. workshop and laboratory skills.
- 7. the ability to select and use appropriate equipment, tools and methods;
- 8. the ability to combine theory and practice to solve control engineering problems;
- 9. an understanding of applicable techniques and methods in control engineering, and of their limitations:

DESCRIPTION OF CONTENTS: PROGRAMME

- 0- Introduction
- 1- Transformations.
 - 1.1 Basic concepts
 - 1.2 Fourier Transform
 - 1.3 Laplace Transform.
- 2- Modelling of systems
 - 2.1 Mathematical models
 - 2.2 Linealization.
 - 2.3 Transference function.
 - 2.4 Diagram Blocks.
 - 2.5 Mason
- 3- Temporary analysis of systems
 - 3.1 The concept of Temporal analysis
 - 3.2 Response to the step signal
 - 3.3 Equivalent systems
 - 3.4 Routh-Hurwitz's Method
 - 3.5 Influence of poles and zero.
 - 3.6 Response to standard signals.
 - 3.7 Systems of first and second order.
 - 3.8 Root Locus.
- 4- Introduction to control systems
 - 4.1 Architectures of control.
 - 4.2 Precision.
 - 4.3 Sensitivity to disturbances.
 - 4.4 Temporary design of regulators PID.
 - 4.5 Empirical adjustment of regulators PID.
- 5 Frequential analysis of systems

- 5.1 Diagram of Bode.
- 5.2 Nyquist Diagram.
- 5.3 Frequential design of regulators PID.

LEARNING ACTIVITIES AND METHODOLOGY

- Skillful classes, classes of resolution of doubts in reduced groups, individual presentations of the students, individual tutorials and personal work of the student; oriented to the theoretical knowledge acquisition (3 credits ECTS).
- Practices of laboratory and individual classes of problems in reduced groups, individual tutorials and personal work of the student; oriented to the acquisition of practical abilities related to the program of the subject (3 credits ECTS).

ASSESSMENT SYSTEM

- Evaluación continua basada en problemas entregables 10%
- Practicas obligatorias 10%
- 2 Exámenes parciales 15% y 15%
- Examen final 50%
- Será necesario obtener al menos un 4 en el examen final para superar la asignatura.

% end-of-term-examination:	50
% of continuous assessment (assigments, laboratory, practicals):	50
