

Academic Year: (2019 / 2020)

Review date: 27/03/2019 10:00:19

Department assigned to the subject: Electrical Engineering Department

Coordinating teacher:

Type: Electives ECTS Credits : 6.0

Year : Semester :

OBJECTIVES

- CB1. Students have demonstrated knowledge and understanding in a field of study that builds upon their general secondary education, and is typically at a level that, whilst supported by advanced textbooks, includes some aspects that will be informed by knowledge of the forefront of their field of study
- CB2. Students can apply their knowledge and understanding in a manner that indicates a professional approach to their work or vocation, and have competences typically demonstrated through devising and sustaining arguments and solving problems within their field of study
- CB3. Students have the ability to gather and interpret relevant data (usually within their field of study) to inform judgments that include reflection on relevant social, scientific or ethical issues
- CB4. Students can communicate information, ideas, problems and solutions to both specialist and non-specialist audiences
- CB5. Students have developed those learning skills that are necessary for them to continue to undertake further study with a high degree of autonomy
- CG2. Learn new methods and technologies from basic scientific and technical knowledge, and being able to adapt to new situations.
- CG3. Solve problems with initiative, decision making, creativity, and communicate and transmit knowledge, skills and abilities, understanding the ethical, social and professional responsibility of the engineering activity. Capacity for leadership, innovation and entrepreneurial spirit.
- CG4. Solve mathematical, physical, chemical, biological and technological problems that may arise within the framework of the applications of quantum technologies, nanotechnology, biology, micro- and nano-electronics and photonics in various fields of engineering.
- CG5. Use the theoretical and practical knowledge acquired in the definition, approach and resolution of problems in the framework of the exercise of their profession.
- CG6. Develop new products and services based on the use and exploitation of new technologies related to physical engineering.
- CG7. Undertake further specialized studies, both in physics and in the various branches of engineering.
- CE6. Solve problems of applied thermodynamics, heat transmission and fluid mechanics in the field of engineering.
- CE20. Understand and address the general problems of the field of Energy, as well as the scientific and technological foundations of its generation, conversion, transport and storage.
- CT1. Work in multidisciplinary and international teams as well as organize and plan work making the right decisions based on available information, gathering and interpreting relevant data to make judgments and critical thinking within the area of study.
- RA1. To have acquired sufficient knowledge and proved a sufficiently deep comprehension of the basic principles, both theoretical and practical, and methodology of the more important fields in science and technology as to be able to work successfully in them;
- RA2. To be able, using arguments, strategies and procedures developed by themselves, to apply their knowledge and abilities to the successful solution of complex technological problems that require creating and innovative thinking;
- RA3. To be able to search for, collect and interpret relevant information and data to back up their conclusions including, whenever needed, the consideration of any social, scientific and ethical aspects relevant in their field of study;
- RA4. To be able to successfully manage themselves in the complex situations that might arise in their academic or professional fields of study and that might require the development of novel approaches or

solutions;

RA6. To be aware of their own shortcomings and formative needs in their field of specialty, and to be able to plan and organize their own training with a high degree of independence.

DESCRIPTION OF CONTENTS: PROGRAMME

MODULE 1. SUSTAINABILITY

1.1-Introduction to RREE. Sustainability.

1.2-Summary by technologies.

1.3 Energy efficiency

1.4-Energy from the sea.

MODULE 2. WIND POWER

WIND 1. Wind Energy. Current status and resources.

1.1- Current status of wind power around the world

1.2- Wind resource. Factors affecting wind production.

1.3-Models of assessing wind potential in a wind site. Atlas IDAE.

WIND 2. Energy Production

2.1- Power curve. Defining FC, HE.

2.2- Basic exercise of Alwin. Energy calculation (programs and web Alwin IDAE)

WIND 3. Wind Technology

3.1- Wind turbine. Types. Components: turbine, tower, hub, generator, gearbox, converter, protections.

3.2- Wind turbine. Sizing wind generators.

3.3- Wind generators. Miniwind. Wind energy from the sea.

3.4- Wind generators. Speed variation associated with the variation of the blade pitch of the turbine.

WIND 4. Wind energy systems connected to the grid .

4.1 Evolution of the control systems: fixed speed and speed. Tracking the maximum power point with maximum efficiency at part load. Speed control systems and power at part load and full load.

4-2. Wind farms. Sizing. Network Attached Project wind farm. Using specific software (RETScreen).

4-3. Network integration. Voltage Dips. Stability. Regulations. Exercise voltage network nodes

WIND. 5. Autonomous wind systems.

5.1-Types and functions.

5.2-Windpumps.

5.3- Selection.

WIND 6. Regulation

6.1-Regulation in the field of renewable energies.

6.2-Spanish case.

MODULE 3: PHOTOVOLTAIC

PV 1-Introduction to solar energy

1.1- Solar energy all over the world

1.2-Resource

PV 2. Basic Technology.

2.1- Solar cell. Basic principles and current technology.

2.2- Characteristic of the solar cell. Exercises solar cell, cell temperature.

PV 3. Solar panels

3.1- Solar panels. Generators electrical characteristic of photovoltaic solar panels. Varying voltage of the photovoltaic panels. Testing.Characteristic curve with variation of irradiance and cell temperature.

3.2 Architectural integration.

3.3 Solar tracking

PV 4-Inverters.

4.1-Types and functions. Performance.

4.2-Regulation

4.3- Tracking the maximum power point of photovoltaic generrador (MPPT)

PV 5- Autonomous photovoltaic systems.

5.1 -Components. Batteries. Charge regulators. Inverters.

5.2- Autonomous photovoltaic systems: and dimensioning schemes.

5.3-Sizing exercises depending on the location and energy requirements.

PV 6. Photovoltaic Systems PV grid connected.

6.1 Schemes

6.2-Photovoltaic systems connected to the grid. Protections.

6.3-Regulations.

6.4- Sizing with specific software (PVSYST).

PV 7 Net balance.
 7.1- Scheme and characteristics
 7.2- Regulation
 PV 8. Electrical solar thermal power plants.
 8.1-Types
 8.2 Characteristics (CCP)
 8.3Characteristics (Tower)
 PV 9- Hibryd systems.
 9.1-Microgrids with photovoltaic generation, wind and accumulation systems.
 9.2-Types and functions.
 9.3-Regulations.
 9.4-Dimensioning with specific software (Homer Pro)

LEARNING ACTIVITIES AND METHODOLOGY

AF1. THEORETICAL-PRACTICAL CLASSES. Knowledge and concepts students must acquire. Receive course notes and will have basic reference texts. Students partake in exercises to resolve practical problems
 AF2. TUTORING SESSIONS. Individualized attendance (individual tutoring) or in-group (group tutoring) for students with a teacher. Subjects with 6 credits have 4 hours of tutoring/ 100% on- site attendance.
 AF3. STUDENT INDIVIDUAL WORK OR GROUP WORK. Subjects with 6 credits have 98 hours/0% on-site.
 AF8. WORKSHOPS AND LABORATORY SESSIONS. Subjects with 3 credits have 4 hours with 100% on-site instruction. Subjects with 6 credits have 8 hours/100% on-site instruction.
 AF9. FINAL EXAM. Global assessment of knowledge, skills and capacities acquired throughout the course. It entails 4 hours/100% on-site
 AF8. WORKSHOPS AND LABORATORY SESSIONS. Subjects with 3 credits have 4 hours with 100% on-site instruction. Subjects with 6 credits have 8 hours/100% on-site instruction.
 MD1. THEORY CLASS. Classroom presentations by the teacher with IT and audiovisual support in which the subject's main concepts are developed, while providing material and bibliography to complement student learning
 MD2. PRACTICAL CLASS. Resolution of practical cases and problem, posed by the teacher, and carried out individually or in a group
 MD3. TUTORING SESSIONS. Individualized attendance (individual tutoring sessions) or in-group (group tutoring sessions) for students with teacher as tutor. Subjects with 6 credits have 4 hours of tutoring/100% on-site.
 MD6. LABORATORY PRACTICAL SESSIONS. Applied/experimental learning/teaching in workshops and laboratories under the tutor's supervision.

ASSESSMENT SYSTEM

% end-of-term-examination/test:	60
% of continuous assessment (assignments, laboratory, practicals...):	40

SE1. FINAL EXAM. Global assessment of knowledge, skills and capacities acquired throughout the course. The percentage of the evaluation varies for each subject between 60% and 0%.
 SE2. CONTINUOUS EVALUATION. Assesses papers, projects, class presentations, debates, exercises, internships and workshops throughout the course. The percentage of the evaluation varies for each subject between 40% and 100% of the final grade.
