

Academic Year: ( 2019 / 2020 )

Review date: 21-04-2020

Department assigned to the subject: Signal and Communications Theory Department

Coordinating teacher: GONZALEZ SERRANO, FRANCISCO JAVIER

Type: Electives ECTS Credits : 3.0

Year : Semester :

## REQUIREMENTS (SUBJECTS THAT ARE ASSUMED TO BE KNOWN)

Digital Communications  
Communication Channels and Systems  
Electronic Systems

## OBJECTIVES

Learning results:

- Know the basic structure of unmanned vehicles.
- Know the typical architecture of the on-board and ground systems, as well as their fundamental components.
- Design the architecture of the systems needed for the fulfillment of a specific mission.

## DESCRIPTION OF CONTENTS: PROGRAMME

Unit 1. Introduction to Remotely Piloted Aircraft System (RPAS) and Unmanned Air Systems (UAS)

- History
- Applications: missions
- Systems: integration
- Normative: operation. Safety of Flight. Human Factors.
- Socio-economic impact
- Types and classification of UAS
- Introduction to UAS Design and Construction

Unit 2. Basic Technologies

- Airframe
  - \* Materials. 3D Printing & Additive Manufacturing
- Propulsion and Power
  - \* Battery Management Systems (BMS), Power Systems, Fuel Cells and Propellers. Solar Power Solutions.
- Guidance and Control
  - \* Autopilots
    - + Type of navigation: autonomous (Inertial); non-inertial (e.g., GNSS)
    - + Sensors (Barometer, IMU, GPS): measurement attitude and conditions of the aircraft, instrumentation
    - + Types of Autopilots, operating principles
    - + System control elements, actuators (servos)
- Sensing
  - \* Cameras, Imaging & Vision Systems
  - \* Optic (Visible, IR). Range (RADAR, LiDAR, SONAR). Magnetic (MAD)
  - \* Inertial Sensors: IMU.
- Communication
  - \* Command and Control
  - \* Data links
  - \* Ultra reliable low latency communications. Massive M2M Communications. IoT, 5G.
  - \* Medium Access Control. Networking. Security
- Processing
  - \* Data Storage
  - \* Data Fusion. Information Extraction. Perception.
  - \* Detection, classification, tracking. Decision Making. Learning.
  - \* Edge and Fog Computing.
- Ground Control Station

- \* GCS software
- \* UAV Launch & Recovery Systems

Unit 3. Systems for interaction with the physical world

- Localization, identification and Navigation systems.
- \* Collision Avoidance Systems. Traffic Management and Control.

Unit 4. Applications

- Intelligent Transports: ground, air and sea.
- Services, Agriculture and Industry: Aerial photography, filming and mapping, precision agriculture, asset and infrastructure inspection
- Security and defense: surveillance, warfare.

Unit 5. RPAS/UAS operation

- Regulations
- Operational procedures (Flight and Mission planning, Emergency procedures, radio spectrum)
  - \* Mission control and management software
- Human Factors

## LEARNING ACTIVITIES AND METHODOLOGY

Theory Classes: 0.75 ECTS

Practical/Lab. classes: 0.5 ECTS

Group Project: 1 ECTS

- Development of a project of systems integration in a UAV

Individual Project: 0.75 ECTS

The learning activities, methodology and tutoring regime will be organized according to the regulations specified by the university:

[https://www.uc3m.es/ss/Satellite/UC3Minstitucional/es/ListadoNormativas/1371206706530/Estudios\\_de\\_Grado](https://www.uc3m.es/ss/Satellite/UC3Minstitucional/es/ListadoNormativas/1371206706530/Estudios_de_Grado)

## ASSESSMENT SYSTEM

End-of-term exam: 20 %

Group Project: 50 %

Individual Project: 30 %

<b>% end-of-term-examination:</b>	20
<b>% of continuous assessment (assignments, laboratory, practicals...):</b>	80
