

Academic Year: (2019 / 2020)

Review date: 05-05-2020

Department assigned to the subject: Department of Electronic Technology

Coordinating teacher: PLEITE GUERRA, JORGE

Type: Compulsory ECTS Credits : 3.0

Year : 4 Semester : 2

STUDENTS ARE EXPECTED TO HAVE COMPLETED

Since students must face the preparation of a project document for industrial engineering in electronics, the student will have an easier time developing this course and get better use of it if you have passed all the subjects of the specialty of 1 , 2 and 3 of the degree.

COMPETENCES AND SKILLS THAT WILL BE ACQUIRED AND LEARNING RESULTS.

By the end of this subject, students will be able to have:

1. knowledge and understanding to develop, execute and manage industrial engineering projects, according to good practices, standards and regulations
2. awareness of the wider multidisciplinary context of engineering.
3. the ability to apply their knowledge and understanding to analyse engineering products, processes and methods;
4. the ability to apply their knowledge and understanding to develop and realise designs to meet defined and specified requirements;
5. the ability to conduct searches of literature, and to use data bases and other sources of information;
6. an awareness of the non-technical implications of engineering practice.
7. function effectively as an individual and as a member of a team;
8. demonstrate awareness of the health, safety and legal issues and responsibilities of engineering practice, the impact of engineering solutions in a societal and environmental context, and commit to professional ethics, responsibilities and norms of engineering practice;
9. demonstrate an awareness of project management and business practices, such as risk and change management, and understand their limitations
