

Chemical basis of engineering

Academic Year: (2020 / 2021)

Review date: 24-08-2020

Department assigned to the subject: Materials Science and Engineering and Chemical Engineering Department

Coordinating teacher: CABANELAS VALCARCEL, JUAN CARLOS

Type: Basic Core ECTS Credits : 6.0

Year : 1 Semester :

Branch of knowledge: Engineering and Architecture

OBJECTIVES

By the end of this subject, students will be able to have:

1. Knowledge and understanding of the chemical basis, organic and inorganic applied chemistry underlying the branch of industrial engineering;
2. The ability to apply their knowledge and understanding to identify, formulate and solve problems of chemical basis, organic and inorganic applied chemistry using established methods;
3. The ability to design and conduct appropriate experiments of chemistry, interpret the data and draw conclusions;
4. Workshop and laboratory skills in chemistry.
5. The ability to select and use appropriate equipment, tools and methods to solve problems of chemical basis, organic and inorganic applied chemistry;
6. The ability to combine theory and practice to solve of chemical basis, organic and inorganic applied chemistry.
7. The ability to function effectively both individually and as a team.

DESCRIPTION OF CONTENTS: PROGRAMME

IMPORTANT: the schedule will be adjusted according to the recently approved by Junta de Escuela in April / May 2013

Atoms, Molecules and Ions. Chemical bonding.
 Thermochemistry and chemical equilibrium.
 Chemical Equilibrium: Acid-Base and solubility equilibria. Electrochemistry.
 Chemical Kinetics
 Applied Organic and Inorganic Chemistry
 Basic operations in Chemical Engineering

LEARNING ACTIVITIES AND METHODOLOGY

Master classes, tutorial classes in small groups dedicated to resolving student questions and doubts, student presentations, individual tutorials, and individual work by the students; activities dedicated to acquisition of theoretical knowledge related to the lecture course (3 ECTS credits)

Laboratory practical sessions and classes in small groups dedicated to solving question sheets, individual tutorials and individual work by the student; activities dedicated to acquisition of practical skills related to the lecture course (3 ECTS credits)

ASSESSMENT SYSTEM

- Continuous evaluation (minimum 50 %):

Continuous evaluation will be based on class attendance and assessed tests performed in class (minimum 40%) and attendance to practical sessions and assessed practical work paper (10%),

- final exam (maximum 50%).

Laboratory practices are mandatory for being assessed.

See detailed planning at the beginning of the course for more details.

% end-of-term-examination: 50

% of continuous assessment (assignments, laboratory, practicals...): 50
