

Academic Year: (2020 / 2021)

Review date: 07-07-2020

Department assigned to the subject: Computer Science and Engineering Department

Coordinating teacher: IGLESIAS MAQUEDA, ANA MARIA

Type: Compulsory ECTS Credits : 6.0

Year : 4 Semester : 2

REQUIREMENTS (SUBJECTS THAT ARE ASSUMED TO BE KNOWN)

Files and Data bases

OBJECTIVES

General competences:

- Abstraction (PO a)
- Analysis and Synthesis (PO a)
- Organize and Planning (PO a)
- Communication of conclusions (PO g)
- Problem solving in new or known environments (PO c)
- Capacity of differentiate and make critical analysis of problem's solutions (PO c)
- Teamwork (PO d)
- Capacity of applying theoretical concepts (PO c)
- Capacity of integrating concepts and making critical analysis (PO c)

Specific competences

- Cognitive (PO a)
 1. Theoretical knowledge about database methodologies and data models
 2. Theoretical knowledge about conceptual, logical and physical database design.
 3. Basic theoretical knowledge about database administration: system security, data integrity, backup and data recovery.
 4. Theoretical knowledge about monitoring and optimization of the performance of the database and selects.
 5. Theoretical knowledge about databases paradigms, technologies and architectures.
 6. Theoretical basic knowledge about database administration and maintenance of databases (CECRI5).
 7. Theoretical basic knowledge about the use and programming of databases (CGB4).
- Procedimental/Instrumental (PO a, g, k)
 1. Use of Database Design Methodologies
 2. Conceptual Design, Standard Logical Design and Specific Logical Design based on data models.
 3. Analysis of data redundancy or insert, delete or updates anomalies.
 4. Administration of databases, physical design and database tuning using a commercial Database Management System (DBMS) as Oracle.
 5. Use of administration tools and tuning tools in a commercial DBMS
 6. Practical cases guaranteeing data integrity, availability and consistency in databases
 7. Ability to actively participate in the specification, design, implementation and maintenance of information systems and communication (CESI3)
 8. Use ICT efficiently means to write technical reports and project reports and papers on Information Technology (CG9)
- Attitudinal (PO c, d, f)
 1. Creativity: Discover new ideas and solve problems in new environments
 2. Capacity to make diagrams, structuring knowledge
 3. Interest for the quality of the work
 4. Motivation for the success
 5. Interest for investigating and finding solutions to new problems
 6. Capacity to differentiate and make critical analysis of problem's
 7. Capacity of setting out and discuss different solutions to the same problem, contrasting and comparing different solutions.
 8. Capacity of communication
 9. Be able to present and discuss proposals on teamwork, demonstrating personal and social skills

that enable it to assume different responsibilities within the same (CG7)

DESCRIPTION OF CONTENTS: PROGRAMME

Database systems, database paradigms, database methodologies, data models, basics about database administration (security and confidentiality; tuning and recovery; data integrity; concurrency and consistency), database design, database tuning and query optimization, distributed databases, parallel databases, analytical databases, NoSQL data storage systems, database trends.

PROGRAM:

TOPIC 1. Introduction to Database Systems

Item 1.1. Definitions and Concepts

Item 1.2 Database Paradigms

TOPIC 2: Database methodologies

Item 2.1. Phases.

Item 2.2. Components

Item 2.3. Proposed methodology for Relational Design

TOPIC 3: Conceptual Design: The model E / R

Item 3.1. Introduction to E / R

Item 3.2. Basic components: Entities, Attributes, Domains and Interrelations

Item 3.3. Generalizations / Specializations

Item 3.4. N-ary relationships

Item 3.5. Control of Redundancy

TOPIC 4: Logic Design. Transformation from E/R Model to Relational Model

Item 4.1. Refreshing Concepts of Relational Model

Item 4.2. Transformation of components from E/R

TOPIC 5: Database Administration

Item 5.1. Fundamentals of Database Administration

Item 5.2. Physical design

Item 5.3. Security and Privacy

Item 5.4. Recovery and Concurrency

Item 5.5. Query Optimization

ITEM 6: Distributed and Parallel data storage systems

Item 6.1. Distributed systems

Item 6.2. Parallel systems

ITEM 7: Analytical Databases

Item 7.1. Introduction

Item 7.2 Transactional Systems vs Analytical Systems

ITEM 8: NoSQL Data storage systems

Item 7.1. Introduction and motivation

Item 7.2. Key-value data stores

Item 7.3. Document-based data stores

Item 7.4. Column-based data stores

Item 7.5. Graph-based data stores

LEARNING ACTIVITIES AND METHODOLOGY

- 1) Theoretical lectures: 1.5 ECTS. To achieve the specific cognitive competences of the course (PO a).
- 2) Practical lectures: 1,5 ECTS. To develop the specific instrumental competences and most of the general competences, such as analysis, abstraction, problem solving and capacity to apply theoretical concepts. Besides, to develop the specific attitudinal competences. During the practical lectures, practical cases are developed incorporating all studied techniques and methods (PO a, c, d, f, g, k) (CESI3, CECRI5, CGB4, CG9, CG7).
- 3) Guided academic activities (present teacher): 0.1 ECTS. Critical analysis of problems¿ solutions. (PO a, c, d, g) (CESI3, CG7)
- 4) Guided academic activities (absent teacher): 1.9 ECTS. Exercises, Documentation of practical activities and complementary readings (PO a, c, d, f, g) (CESI3, CECRI5, CGB4, CG9, CG7).
- 5) Exercises and examination: 1 ECTS. To complete the development of specific cognitive and procedimental capacities (PO a, c) (CESI3).

ASSESSMENT SYSTEM

Exercises and examinations are both learning and evaluation activities. The evaluation system includes the assessment of guided academic activities and practical cases, with the following weights:

Guided academic activities

- Present teacher: (PO a, c, d, g) (CESI3, CG7).

- Absent teacher: (PO a, c, f, g) (CESI3, CECRI5, CGB4, CG9, CG7).

- 2) Practical case related to DB Design and Implementation: 50% (PO a, c, d, f, g, k) (CESI3, CECRI5, CGB4, CG9).
- 3) Mid-Term exam related to DB Administration: 10% (PO a,c) (CESI3)
- 4) Final Examination: 30% (PO a, c) (CESI3). A minimum score of 5 up to 10 is required in this test to take into account the continuous assessment

% end-of-term-examination:	30
% of continuous assessment (assignments, laboratory, practicals...):	70
