
Academic Year: (2020 / 2021)**Review date: 06-07-2020**

Department assigned to the subject: Department of Computer Science and Engineering**Coordinating teacher: GARCIA CARBALLEIRA, FELIX****Type: Electives ECTS Credits : 3.0****Year : 1 Semester : 1**

LEARNING RESULTS AND COMPETENCES AND SKILLS THAT WILL BE ACQUIRED.

- Modelling, and evaluating distributed systems.
- Ability to design distributed applications.
- To know the main aspect of distributed system design.
- To know and apply simulation techniques in distributed systems.
- Ability to analyze technical documents and scientific papers.
- Ability to transmit the results of a scientific research.

DESCRIPTION OF CONTENTS: PROGRAMME

1. Introduction to distributed systems
 - Types of computing systems
 - Elements of a distributed system
 - Message passing
 - Design of distributed systems
 - The CAP theorem
 - Middlewares
2. Distributed Algorithms
 - Clock synchronization
 - Mutual exclusion
 - Leader election
 - Distributed consensus
 - Group communication
 - Global states
 - Case of study: ZooKeeper
3. Fault tolerant
 - Fault tolerant concepts
 - Replication
4. Simulation of distributed systems
 - Discret event simulation
 - Generation of random variables
 - Metrics of performance
 - Simulation experiments
 - Error estimation
 - Comparing two alternatives
 - Introduction to SimGrid
5. Scheduling in distributed systems
 - Scheduling
 - Scheduling methods
 - Process migration
 - Scheduling of independent tasks
 - Scheduling of parallel applications
 - Heuristics
 - Load balancing algorithms
 - Assignment of processors
6. Clusters and grid computing
 - Architecture of a cluster

- Types of cluster
 - Single system image
 - Techniques to tolerate latency in large scale systems
 - Grid computing
 - Globus
7. HPC in distributed environments
- High performance computing
 - HW platforms
 - MPI
8. Distributed file systems
- Architecture of a distributed storage system
 - Network file systems
 - Distributed file systems
 - Shared disks file systems
 - Parallel file systems
 - I/O parallel interfaces
 - I/O parallel optimizations
9. Large scale distributed systems
- Peer to Peer
 - Volunteer computing
 - Cloud computing
 - Big Data
 - Introduction to Apache Hadoop

LEARNING ACTIVITIES AND METHODOLOGY

- Practical and Theoretical lectures
- Student work

ASSESSMENT SYSTEM

The assessment will be based on:

- Reading and description of research papers (30%).
- Experimental simulation project (40%)
- Reading, analysis and public presentations of research papers by students (30%)

% end-of-term-examination:	0
% of continuous assessment (assignments, laboratory, practicals...):	100

BASIC BIBLIOGRAPHY
