

Academic Year: ( 2020 / 2021 )

Review date: 09/07/2020 21:21:30

Department assigned to the subject: Bioengineering and Aerospace Engineering Department

Coordinating teacher: RIPOLL LORENZO, JORGE

Type: Compulsory ECTS Credits : 6.0

Year : 2 Semester : 1

**REQUIREMENTS (SUBJECTS THAT ARE ASSUMED TO BE KNOWN)**

The student should have completed the following subjects of the first and second quarter of the first year:

- Medical imaging technologies
- Analytical and monitoring systems
- Diagnosis and therapy systems

**OBJECTIVES**

This subject qualifies student to create plan the installation and commissioning of the most relevant electromedical systems. Students will also be capable elaborate the maintenance and supply programmes. To do this, he will learn to draw up a plan for the renewal and acquisition of new electromedical systems and equipment, taking into account both the technical requirements and the cost of the different alternatives.

**COMPETENCES THAT THE STUDENT ACQUIRES WITH THIS MATTER**

CB6 Possess and understand knowledge that provides a base or opportunity to be original in the development and / or application of ideas

CB7 That students know how to apply the knowledge acquired and their ability to solve problems in new or unfamiliar environments within broader (or multidisciplinary) contexts related to their area of study

CB8 That students are able to integrate knowledge and face the complexity of formulating judgments based on information that, being incomplete or limited, includes reflections on social and ethical responsibilities linked to the application of their knowledge and judgments

CB9 That students know how to communicate their conclusions and the knowledge and ultimate reasons that sustain them to specialized and non-specialized audiences in a clear and unambiguous way

CB10 That students have the learning skills that allow them to continue studying in a way that will be largely autonomous.

CG3 Ability to design and carry out technological projects in the field of the application of engineering to medicine, as well as to analyze and interpret their results.

CG4 Ability to evaluate medical equipment and instrumentation in complex multidisciplinary environments, assessing the needs of different clinical users and offering objective measures for decision making.

CE1 Ability to evaluate algorithms and data processing techniques in complex multidisciplinary environments, assessing the needs of different clinical users and offering objective measures for decision making.

CE3 Ability to apply advanced techniques of health technology management, both in technical and economic aspects, and including the acquisition and maintenance thereof.

CE11 Ability to plan, manage and supervise the installation and maintenance of non-implantable active medical devices in electromedicine systems and their associated facilities, under quality criteria, in safety conditions and complying with current regulations.

CE13 Ability to plan, manage and supervise hospital infrastructures under quality criteria, in safety conditions and complying with current regulations.

**LEARNING RESULTS THAT THE STUDENT ACQUIRES**

In overcoming this subject, students should be able to:

- Characterize the clinical electromedical service of a hospital/health institution and its relationship with the technical assistance services, recognizing the importance and repercussion of its proper management.
- Prepare a plan for the renewal and acquisition of new equipment of clinical electromedicine, analyzing the clinical needs of the center and the obsolescence and state of the available technology park.
- Define the technical characteristics of the new equipment to be acquired, considering the compatibility and connectivity with other facilities and infrastructures of the health center and the current technological innovation.
- Analyze the cost of the different purchase alternatives of equipment, breaking down the corresponding items and using reference prices.
- Elaborate an inventory and learn how to take care of its management.

## DESCRIPTION OF CONTENTS: PROGRAMME

The content of the subject is:

- Asset management
  - o Life cycle of the electromedical equipment
  - o Costs analysis
  - o Inventory
- Acquisition of new equipment
  - o Renovation plan and acquisition plan for new electromedical systems and equipment
- Planning and management of electromedical systems

## LEARNING ACTIVITIES AND METHODOLOGY

### LEARNING ACTIVITIES

- Theoretical class
- Theoretical-practical class
- Practical seminars
- Tutorials
- Individual and team work

### TEACHING METHODOLOGIES

- Exhibitions in the teacher's class with support of computer and audiovisual media, in which the main concepts of the subject are developed and the bibliography is provided to complement the students' learning.
- Resolution of practical cases, problems, etc. raised by the teacher individually or in groups.
- Exhibition and discussion in class, under the teacher's moderation of topics related to the content of the subject, as well as practical cases.
- Preparation of papers and reports individually or in groups.

## ASSESSMENT SYSTEM

**% end-of-term-examination/test:** 40

**% of continuous assessment (assignments, laboratory, practicals...):** 60

Continuous assessment: 60%

- Carrying out work, problems and/or practical activities.
- Student participation: It includes contribution to seminars, forum in Aula Global, attitude, classwork (quizzes or exercises to be solved in groups or individually), or other activities.

Final exam: 40%

- The final exam will cover the whole subject and will count 40 % of the final score. The minimum score in the final exam to pass the subject is 4.0 over 10, notwithstanding the mark obtained in continuous evaluation.

Extraordinary exam:

- The final score for students who attend the extraordinary exam will be 40% of the extraordinary exam and 60% of the continuous assessment, if available. In case of not presenting continuous assessment, the final score will be 100% the extraordinary exam.

### ACADEMIC CONDUCT:

Plagiarism, cheating or other acts of academic dishonesty will be not tolerated. Any infractions whatsoever will result in a failing grade.

<b>% end-of-term-examination/test:</b>	40
<b>% of continuous assessment (assignments, laboratory, practicals...):</b>	60
