

Academic Year: (2020 / 2021)

Review date: 11-07-2020

Department assigned to the subject: Department of Telematic Engineering

Coordinating teacher: LARRABEITI LOPEZ, DAVID

Type: Compulsory ECTS Credits : 3.0

Year : 1 Semester : 1

COMPETENCES AND SKILLS THAT WILL BE ACQUIRED AND LEARNING RESULTS.**BASIC COMPETENCES**

CB6 Possess and understand knowledge that provides a basis or opportunity to be original in the development and / or application of ideas, often in a research context

CB7 That students know how to apply the knowledge acquired and their ability to solve problems in new or unfamiliar environments within broader (or multidisciplinary) contexts related to their area of study

CB10 That students have the learning skills that allow them to continue studying in a way that will be largely self-directed or autonomous

GENERAL COMPETENCES

CG4 Knowledge and understanding of the management principles applicable to productive and service environments.

CG5 Capacity for basic analysis of the requirements for information management and treatment of large volumes of data.

SPECIFIC COMPETENCES

CE9 Ability to identify computer security requirements in connected industry environments

LEARNING RESULTS

As a result of the learning the student will be able to:

- Configure secure transport protocols,
- Know the technologies to mitigate threats and protect data in networked systems.

DESCRIPTION OF CONTENTS: PROGRAMME

- Cryptography concepts: symmetric key and public/private key encryption. Authentication.
- Secure end-to-end transport protocols
- Cybersecurity threats in CI4.0: malware types. Structure, components and infection vectors.
- Techniques and technologies for mitigating threats: attacks and countermeasurements. Firewalls, IDS and SIEMs.
- Data protection in networked systems: security in IP. IPsec. VPNs. Security in wireless communications.

LEARNING ACTIVITIES AND METHODOLOGY**LEARNING ACTIVITIES OF THE SYLLABUS REFERRED TO MATTERS**

- AF1 Theory class
- AF2 Practical classes
- AF4 Laboratory session
- AF5 Supervision sessions
- AF6 Group work
- AF7 Individual work by student
- AF8 Mid-term and final exam

Code activity	Num Hours	Class Hours	% estudiante
AF1	36	36	100
AF2	18	18	100
AF4	9	9	100
AF5	6	6	100
AF6	75	0	0
AF7	75	0	0

AF8	6	6	100
TOTAL MATTER	225	75	33%

TEACHING METHODOLOGIES RELATED TO MATTERS

- MD1 Class presentations supported by computing and audiovisual media, where the main matter concepts are developed and the bibliography to complement the students' learning is provided
- MD2 Critical lectures of texts recommended by the professor: articles, reports, manuals and research papers.
- MD3 Solving of practical use cases, problems, etc posed by the teacher to individuals or groups.
- MD4 Presentation and discussion in class, under the professor supervision of topics related to the matter, as well as several practical use cases.

ASSESSMENT SYSTEM

ASSESSMENT OF THE SYLLABUS LINKED TO MATTERS

- SE1 Class participation
- SE2 Individual or group works
- SE3 Final exam

Assessment

Systems	minimal weight (%)	maximum weight (%)
SE1	0	20
SE2	20	40
SE3	40	60

% end-of-term-examination: 60

% of continuous assessment (assignments, laboratory, practicals...): 40
