

Academic Year: (2020 / 2021)

Review date: 17-07-2020

Department assigned to the subject: Signal and Communications Theory Department

Coordinating teacher: GONZALEZ SERRANO, FRANCISCO JAVIER

Type: Electives ECTS Credits : 3.0

Year : Semester :

REQUIREMENTS (SUBJECTS THAT ARE ASSUMED TO BE KNOWN)

Digital Communications
Communication Channels and Systems
Electronic Systems

OBJECTIVES

Learning results:

- Know the basic structure of unmanned vehicles.
- Know the typical architecture of the on-board and ground systems, as well as their fundamental components.
- Design the architecture of the systems needed for the fulfillment of a specific mission.

DESCRIPTION OF CONTENTS: PROGRAMME

Unit 1. Introduction to Remotely Piloted Aircraft System (RPAS) and Unmanned Air Systems (UAS)

- History
- Applications: missions
- Systems: integration
- Normative: operation. Safety of Flight. Human Factors.
- Socio-economic impact
- Types and classification of UAS
- Introduction to UAS Design and Construction

Unit 2. Basic Technologies

- Airframe
 - * Materials. 3D Printing & Additive Manufacturing
- Propulsion and Power
 - * Battery Management Systems (BMS), Power Systems, Fuel Cells and Propellers. Solar Power Solutions.
- Guidance and Control
 - * Autopilots
 - + Type of navigation: autonomous (Inertial); non-inertial (e.g., GNSS)
 - + Sensors (Barometer, IMU, GPS): measurement attitude and conditions of the aircraft, instrumentation
 - + Types of Autopilots, operating principles
 - + System control elements, actuators (servos)
- Sensing
 - * Cameras, Imaging & Vision Systems
 - * Optic (Visible, IR). Range (RADAR, LiDAR, SONAR). Magnetic (MAD)
 - * Inertial Sensors: IMU.
- Communication
 - * Command and Control
 - * Data links
 - * Ultra reliable low latency communications. Massive M2M Communications. IoT, 5G.
 - * Medium Access Control. Networking. Security
- Processing
 - * Data Storage
 - * Data Fusion. Information Extraction. Perception.
 - * Detection, classification, tracking. Decision Making. Learning.
 - * Edge and Fog Computing.
- Ground Control Station

- * GCS software
- * UAV Launch & Recovery Systems

Unit 3. Systems for interaction with the physical world

- Localization, identification and Navigation systems.
 - * Collision Avoidance Systems. Traffic Management and Control.

Unit 4. Applications

- Intelligent Transports: ground, air and sea.
- Services, Agriculture and Industry: Aerial photography, filming and mapping, precision agriculture, asset and infrastructure inspection
- Security and defense: surveillance, warfare.

Unit 5. RPAS/UAS operation

- Regulations
- Operational procedures (Flight and Mission planning, Emergency procedures, radio spectrum)
 - * Mission control and management software
- Human Factors

LEARNING ACTIVITIES AND METHODOLOGY

Theory Classes: 0.75 ECTS

Practical/Lab. classes: 0.5 ECTS

Group Project: 1 ECTS

- Development of a project of systems integration in a UAV

Individual Project: 0.75 ECTS

The learning activities, methodology and tutoring regime will be organized according to the regulations specified by the university:

https://www.uc3m.es/ss/Satellite/UC3Minstitucional/es/ListadoNormativas/1371206706530/Estudios_de_Grado

ASSESSMENT SYSTEM

End-of-term exam: 50 %

- The minimum passing score is 4 out of 10 points.

Group Project: 50 %

% end-of-term-examination:	50
% of continuous assessment (assignments, laboratory, practicals...):	50
