Structural Integrity

Academic Year: (2020 / 2021) **Review date: 13-07-2020**

Department assigned to the subject: Continuum Mechanics and Structural Analysis Department

Coordinating teacher: VAZ-ROMERO SANTERO, ALVARO

Type: Electives ECTS Credits : 3.0

Year : 4 Semester :

REQUIREMENTS (SUBJECTS THAT ARE ASSUMED TO BE KNOWN)

Elasticity
Strength of Materials.

OBJECTIVES

By the end of this course, students will be able to have:
1. A systematic understanding of the key concepts and aspects for the analysis and assurance of the structural integrity of mechanical components and structures.
2. The ability to apply their knowledge and understanding to identify, formulate and solve structural integrity problems using established methods.
3. The ability to select and apply analytical methods and modeling of fracture mechanics applicable to structural integrity problems.
4. An understanding of the different calculation methods to analyze structural integrity problems.
5. The ability to design and carry out experiments for the analysis of the structural integrity of mechanical components and structures, interpret the data and draw conclusions.
6. The ability to combine theory and practice to solve structural integrity problems
7. An understanding of the different applicable methods and techniques and their limitations for the analysis of the structural integrity problems
8. An awareness of the implications of engineering practice in the evaluation of the structural integrity issues.

DESCRIPTION OF CONTENTS: PROGRAMME

Basic concepts on Fracture Mechanics

1. Stress and strain fields in linear elastic cracked solids.
2. Fracture criteria in linear elastic cracked solids.

Fatigue behavior

3. Fatigue crack propagation.
4. Fatigue life calculation of structural elements.
5. Basic concepts on numerical techniques in fracture mechanics.

Structural integrity crirteria

6. Design against fracture and fatigue.
7. Standards in fracture and fatigue.

LEARNING ACTIVITIES AND METHODOLOGY

Lecture sessions (master class) and practical sessions will be taught.
The first are geared to the acquisition of theoretical knowledge, and the second to the acquisition of practical skills related to corresponding theoretical concepts.

ASSESSMENT SYSTEM

Final exam (obligatory): 40%

Continuum evaluation: 60%
- Laboratory: 20%
- Evaluation controls: 40%

In order to pass the course, attendance and successful completion of the laboratory practices foreseen in the weekly planning are mandatory. The weighting of the laboratory practice mark in the continuous assessment corresponds to what it is established in the course, in accordance with the regulations of the university. In this course, the weighting of the laboratory practices takes the value of 20% of the continuous assessment grade.

% end-of-term-examination:	40
% of continuous assessment (assigments, laboratory, practicals…):	60
