

Academic Year: (2020 / 2021)

Review date: 23/01/2021 13:58:49

Department assigned to the subject: Materials Science and Engineering and Chemical Engineering Department

Coordinating teacher: BAUTISTA ARIJA, MARIA ASUNCION

Type: Electives ECTS Credits : 3.0

Year : 4 Semester :

REQUIREMENTS (SUBJECTS THAT ARE ASSUMED TO BE KNOWN)

Technology of Materials

OBJECTIVES

- Knowledge about the basic mechanism of surface deterioration: aqueous corrosion, corrosion in hot gases and wear.
- Ability to interpret the results of the most common corrosion and wear tests.
- Knowledge about the advantages and limitations of the techniques and technologies most used to protect the surfaces and improve their properties.

DESCRIPTION OF CONTENTS: PROGRAMME

2. HIGH TEMPERATURA CORROSION

- 2.1 Thermodynamics aspects
- 2.2 Selective corrosion of alloys
- 2.3. Kinetics aspects

3. CORROSION ACUOSA

- 3.1 Thermodynamics aspects
- 3.2 Mechanisms y kinetic of general and galvanic corrosion
- 3.3 Types of localized corrosion. Probabilistic studies.
- 3.4 Types of corrosion determined by metallurgical aspects.
- 3.5 Accelerated tests in chambers and their evaluation.

4. PROTECTION METHODS AGAINTS CORROSION

- 4.1 Modification of the environment: corrosion inhibitors.
- 4.2 Cathodic protection.
- 4.3 Anodic protection

5. SURFACE PRETREATMENT AND TYPES OF COATINGS

- 5.1 Mechanical pretreatment
- 5.2 Degreasing pretreatment
- 5.3 Acid picking.
- 5.4 Types of coatings. Classification of the coatings by their anticorrosion mechanism

6. METALLIC COATINGS

- 6.1 Immersion coatings
- 6.2 Electroplated coatings
- 6.3 Electroless coatings

7. ORGANIC COATINGS

- 7.1 Painting methods
- 7.2 Types of organic coatings

8. CERAMIC COATINGS

8.1 Conversion coating: chemical process and anodization

8.2 PVD and CVD process

8.3 Thermal spray coatings.

LEARNING ACTIVITIES AND METHODOLOGY

During the lectures, the main concepts will be explained and the students will delve into them through short oral questions they should be able to reason out.

During the fourteen weeks the lectures last, six assessment exercises will be raised to the students to be individually solved with the aim of going more deeply into the contents taught during the lectures.

Students should attend to two lab sessions, obtain the required experimental data and solve in small groups the raised questions. The lab session will have the following contents.

-session 1: Corrosion

-session 2: Coatings

ASSESSMENT SYSTEM

% end-of-term-examination/test:	0
% of continuous assessment (assignments, laboratory, practicals...):	100
¿ 15% attendance to the lab practices and making in small groups a report answering to the raised questions	
¿ 35% 6 exercises that should be made individually.	
¿ 40% 3 test questionnaires related to the three different groups of themes.	
¿ 10% answering to the questions raised during the lectures.
