

Academic Year: (2021 / 2022)

Review date: 04-06-2021

Department assigned to the subject: Computer Science and Engineering Department

Coordinating teacher: VALLS FERRAN, JOSE MARIA

Type: Electives ECTS Credits : 6.0

Year : 4 Semester :

REQUIREMENTS (SUBJECTS THAT ARE ASSUMED TO BE KNOWN)

Programming, Algorithms and Data Structures

OBJECTIVES

Learning outcomes:

R1. Knowledge and understanding: Having basic knowledge and understanding of the scientific and technological foundations of Computer Engineering,

as well as specific knowledge of computer science, computer engineering and information systems.

R2 Engineering Analysis: To be able to identify Computer Engineering problems, recognize their specifications, establish different

resolution methods and select the most appropriate for your solution, taking into account social limitations, applicable in each case.

R5 Engineering Applications: Graduates will be able to apply their knowledge and understanding to solve problems, conduct research

and design devices or processes in the field of Computer Engineering in accordance with criteria of cost, quality, safety, efficiency, respect

for the environment and ethical implications. These skills include the knowledge, use, and limitations of computer systems, computer engineering,

processes, computer architectures, computational models, equipment, practical work, technical bibliography and information sources.

Basic and general competences

CB2. That students know how to apply that knowledge to their work or professional vocation and possess the skills which are usually demonstrated by elaborating and defending their arguments and resolving problems in their area of study;

CB3. Students should be able to compile and interpret relevant information (normally within their area of study) for issuing opinions which include a reflection on relevant themes of a social, scientific or ethical nature.

CB4. That students are able to transmit information, ideas, problems and solutions to both a specialised and non-specialist public;

CB5. That students have developed those learning skills required to undertake further studies with a considerable degree of autonomy.

CG3. To be able to evaluate different possible solutions from a technical, economical and professional perspective and respect to regulations and laws in force.

Specific Competences:

CECRI1. Ability to design, develop, select and evaluate applications and computer systems, assuring its reliability, security and quality, according the ethical principles and the regulations and laws in force

CECRI6: Knowledge and application of the basic algorithmic procedures of IT to design solutions to problems, analyzing the suitability and complexity of the proposed algorithms

CECRI8: Capacity to analyze, design, build and maintain applications in a robust, secure and efficient way selecting the most adequate paradigm and programming languages

DESCRIPTION OF CONTENTS: PROGRAMME

Unit 1. Object Oriented Programming Introduction. Modeling

1.1 Introduction

1.2 Comparing with other programming paradigms

1.3 OO Modeling

Unit 2. Classes and Objects in Java. Inheritance and polymorphism

2.1 Composition and inheritance

2.2 Abstract classes

2.3 Multiple inheritance. Interfaces

2.4 Polymorphism

Unit 3. Exceptions , utility classes and packages. Input / Output

3.1 Exceptions

3.2 Utility classes

3.3 Documentation and packages

3.4 I/O. Files in Java

Unit 4. Advanced Algorithms

4.1 Computational complexity

4.2 Recursive algorithms

4.3 Search algorithms

4.4 Advanced sorting algorithms

4.5 Complex algorithms design with OO

Unit 5. Design Patterns. Other OO languages

5.1 Introduction

5.2 Design patterns catalog

5.3 Other OO languages

LEARNING ACTIVITIES AND METHODOLOGY

- Theory. The course will be given through lectures to teach the basic concepts of Object Oriented Programming (OOP). . Active participation of students and discussion will be encouraged.

- Practical exercises and computer sessions. Lectures will be complemented with practical sessions in computer rooms where practical exercises will be done, allowing to apply the theoretical knowledge.

ASSESSMENT SYSTEM

Continuous Evaluation (40% of the final grade)

Two practical works: 30% of the final grade

A partial exam done during the course : 10% of the final grade

Final exam: 60% of the final grade.

The final exam is compulsory and the student must obtain a minimum of 2.5 points (from 6).

% end-of-term-examination:	60
-----------------------------------	----

% of continuous assessment (assignments, laboratory, practicals...):	40
---	----
