

Academic Year: ( 2021 / 2022 )

Review date: 04/09/2021 16:14:37

Department assigned to the subject: Electronic Technology Department

Coordinating teacher: ZUMEL VAQUERO, PABLO

Type: Compulsory ECTS Credits : 6.0

Year : 3 Semester : 1

## REQUIREMENTS (SUBJECTS THAT ARE ASSUMED TO BE KNOWN)

Programming, Linear Algebra, Calculus II, Physics II

## OBJECTIVES

- Knowing the purpose and operation of analog and digital electronic systems
- Managing basic electronic instrumentation equipment and performing measurements with them
- How to analyze, build and apply basic electronic functions.
- Using CAD tools to calculate and design circuits, as well as to recognize the elements of an electronic circuit and its function within a scheme.
- Analysis of a computer-based digital electronic system, describing both the basic components that make up the system and the programming techniques required to comply with functional specifications.
- Managing integrated development environments for programming of computer-based digital systems

## DESCRIPTION OF CONTENTS: PROGRAMME

Introduction to the course

Block I: Fundamentals of analog electronics

- Theorems of electrical circuits.
- Sources of tension and currents
- Passive components: R, C, L
- Laboratory instrumentation and electronic signal measurements.
- Frequency response
- Electronic components
- Sensors and actuators

Block II: Fundamentals of digital electronics and microcontrollers

- Digital representation of information
- Basic components of digital electronics
- Digital systems based on microcontrollers
- Fundamentals of programming in C
- Peripherals of a microcontroller
  - o I / O Ports
  - o Interrupt management
  - o Timing
  - o Analog / digital conversion
  - o Serial interfaces

## LEARNING ACTIVITIES AND METHODOLOGY

In each week one lecture session (master class) and one exercise-based session (in reduced groups) will be taught. The first is geared to the acquisition of theoretical knowledge, and the second to the acquisition of practical skills related to theoretical concepts. In addition to these sessions, 4 practical

sessions will be held, all of them in the laboratory.

Several exercises will be proposed during the course to be solved individually by the students.

Students will have the possibility of individual tutorials.

#### ASSESSMENT SYSTEM

**% end-of-term-examination/test:** 40

**% of continuous assessment (assignments, laboratory, practicals...):** 60

P1 = Midterm exam Part I (20%) - A grade equal to or greater than 6/10 is required to remove this content from the final exam

LAB = Laboratory sessions (30%)

EJ = Individual exercises (10%)

EF= Final exam (40%). 20% for Part II and 20% for Part I. If  $P1 \geq 6$  the part I grade will be P1

Minimum mark of 3.5/10 in each part in the final exam is required to pass the course
