

Aerospace Design II

Academic Year: (2021 / 2022)

Review date: 21-06-2021

Department assigned to the subject: Department of Bioengineering and Aerospace Engineering

Coordinating teacher: FAJARDO PEÑA, PABLO

Type: Compulsory ECTS Credits : 6.0

Year : 4 Semester : 1

REQUIREMENTS (SUBJECTS THAT ARE ASSUMED TO BE KNOWN)

Introduction to Flight Mechanics
Aerospace Structures.
Aerospace Design I.

OBJECTIVES

The goal of this course is that the student acquires a basic knowledge of aerospace design. Two main topics are covered: Structural Dynamics and vibrations and Mechanism design

Link to document

DESCRIPTION OF CONTENTS: PROGRAMME

Program:

The course is divided in two main blocks:

BLOCK 1

1. Introduction to Structural Dynamics
2. 1 D.O.F systems
3. Multiple D.O.F.s systems
4. Continuous systems
5. Aproximated method

BLOCK 2: Mechanisms Design

1. Planar, spherical, and spatial mechanisms.
2. CAM design.
3. Spur Gears design.
4. Helical Gears, Bevel Gears, Worms, and Worn Gear design.
5. Gear Trains.
6. Flexible Machine Elements.
7. Bearing and Shaft design.

LEARNING ACTIVITIES AND METHODOLOGY

Theory sessions

Problem sessions working individually and in groups.

Lab-sessions.

The methodology will be done as indicated by the University and the Sanitary authorities.

ASSESSMENT SYSTEM

The two blocks are weighted a 50% of the final grade. The following requirements have to be met in order to pass the subject:

- 1) to have a MINIMUM mark of 4.0/10 in the end-of-term exam (having a minimum of 2.5 in each part);
- 2) to have a minimum overall mark of 5.0/10 (weighing 60% the end-of-term exam mark and 40% the mark of the continuous evaluation).

The continuous evaluation may include reports and homework in groups, exams, ...

% end-of-term-examination:	60
% of continuous assessment (assignments, laboratory, practicals...):	40
