

Academic Year: (2021 / 2022)

Review date: 12/07/2021 13:12:13

Department assigned to the subject: Computer Science and Engineering Department

Coordinating teacher: LINARES LOPEZ, CARLOS

Type: Compulsory ECTS Credits : 6.0

Year : 4 Semester : 1

REQUIREMENTS (SUBJECTS THAT ARE ASSUMED TO BE KNOWN)

Programming (Course: 1 / Semester: 1)
Algorithms and Data Structures (Course: 1 / Semester: 2)
Logic (Course: 1 / Semester: 2)
Discrete Mathematics (Course: 1 / Semester: 2)
Artificial Intelligence (Course: 3 / Semester: 2)

OBJECTIVES

Learning results:

R1 Knowledge and understanding: Have basic knowledge and comprehension of scientific and technological fundamentals of computer engineering, as well as a specific knowledge of computer science, and information systems.
R5 Engineering Applications: The graduates will be able to apply their knowledge and understanding to solve problems, lead research activities and design devices or processes from the scope of computer engineering according to cost, quality, safety, efficiency, respect for the environment and ethical implications. These skills include knowledge, use and limitations of computer systems, process engineering, computer architectures, computational models, equipment, practical work, technical bibliography and sources of information.

Basic and general competences:

CGB3 - Ability to understand and dominate the basic concepts of discrete, logical, algorithmic and computational mathematics, and its application for the resolution of engineering problems.
CGO9 - Ability to solve problems with initiative, decision making, autonomy and creativity. Ability to know how to communicate and transmit knowledge, and skills of a computer technical engineer.
CB1 - Students have demonstrated knowledge and understanding in a field of study that builds upon their general secondary education, and is typically at a level that, whilst supported by advanced textbooks, includes some aspects that will be informed by knowledge of the forefront of their field of study
CB3 - Students have the ability to gather and interpret relevant data (usually within their field of study) to inform judgments that include reflection on relevant social, scientific or ethical issues
CB5 - Students have developed those learning skills that are necessary for them to continue to undertake further study with a high degree of autonomy

Specific competitions:

CECRI5 - Knowledge, administration and maintenance of systems, services and computer applications.
CECRI6 - Knowledge and applicability of the basic algorithmic principles in computer science technologies to design effective solutions and to analyze the suitability and complexity of the algorithms proposed
CECRI15 - Knowledge and applicability of the fundamental principles and techniques based on intelligent systems for their practical implementation.

DESCRIPTION OF CONTENTS: PROGRAMME

1. Dynamic Programming
2. Linear Programming
3. Boolean Satisfiability
4. Constraints Programming
5. Search
6. Stochastic Local Search

LEARNING ACTIVITIES AND METHODOLOGY

- * Theory lectures: 1 ECTS. They are aimed at reaching the specific cognitive competences of the subject as much as analysis and abstraction.
- * Practical lectures: 1 ECTS. They are thought to reach the specific practical skills as much as problem resolution and knowledge applicability
- * Continuous evaluation: 1,5 ECTS. They will start during the practical sessions but should be completed as homework. They are expected to complete both the cognitive competences and the practical skills including problem resolution and knowledge applicability
- * Final practice: 2 ECTS. To be done without the direct assistance of a professor, they are aimed to complete and integrate all the specific competences and skills by solving two practical cases. The statements of these problems, the resolution method, the results obtained and its interpretation shall be well documented.
- * Tutoring: TUTORING. Individualized assistance (individual tutoring) or group (collective tutoring) to students by the teacher.
- * Final exam: 0,5 ECTS. It strengthens and complements the development of both the specific cognitive and procedural capacities.

ASSESSMENT SYSTEM

% end-of-term-examination/test:	40
% of continuous assessment (assignments, laboratory, practicals...):	60

Both exercises and exams have a two-fold purpose: on the one hand they are seen as formative activities and also as tools for the individual assessment of every student. The assessment suggested here includes considerations on the activities of the students according to the following criteria. (The relationship with competitions is not specified given that formative activities have already been related to them.)

Exercises: 25%
 Final practice: 35%
 Final exam: 40%

Minimum score in the final exam: 4 (over 10)
 Minimum score in the lab assignments: 3 (over 10) in each one

Percentage of the final exam 40
 Percentage of the rest of the evaluation 60
