## Industrial Automation I

Academic Year: (2022 / 2023) Review date: 20-04-2022

Department assigned to the subject: Systems Engineering and Automation Department

Coordinating teacher: BLANCO ROJAS, MARIA DOLORES

Type: Compulsory ECTS Credits: 6.0

Year : 2 Semester : 1

#### **OBJECTIVES**

By the end of this subject, students will be able to have:

- 1. Knowledge and understanding of the key aspects and concepts of automation and control methods.
- 2. the ability to apply their knowledge and understanding to identify, formulate and solve problems of industrial automation using established methods;
- 3. the ability to apply their knowledge and understanding to develop and realise designs of industrial automation systems to meet defined and specified requirements;
- 4. the ability to design and conduct appropriate experiments, interpret the data and draw conclusions;
- Technical and laboratory skills.
- 6. the ability to select and use appropriate equipment, tools and methods;
- 7. the ability to combine theory and practice to solve engineering problems of industrial automation

#### **DESCRIPTION OF CONTENTS: PROGRAMME**

- 1. Presentation and Introduction of the subject.
  - a. Definition of industrial automation concept
  - b. Historical antecedents
  - c. Continuous systems versus discrete event systems
- Discrete events system modelling: State Diagrams and SFC. Exercise and lab clases.
  - a. Basic concepts of Booleane algebra
  - b. Sequential systems. The concept of a state.
  - c. Graphical representation of sequential systems
  - d. State Diagram Modelling. Exercise clases
  - e. Petri Nets Modelling. Basic concepts.
  - f. Functional Diagram (SFC) Modelling. Exercise clases
- 3. Introduction to automation technologies: wiring and programmable systems. PLC hardware.
- PLCs programming languages:
  - a. Ladder (LD). Exercise and lab classes
  - b. Functional diagram (SFC). Exercise and lab classes
- Actuators:
  - a. Electric engines.
  - b. Hydraulic actuators.
  - c. Pneumatic (actuators, valves, symbology)
- Sensors:
  - a. Classification, features, etc.
  - b. Sensor description
- 7. Introduction to field buses.

### LEARNING ACTIVITIES AND METHODOLOGY

- Theoretical lessons and doubts solving sessions in aggregated groups, tutorial support sessions and student personal work; related to the acquisition of theoretical knowledge (2.5 ECTS).
- Laboratory and problem solving sessions in reduced groups, tutorial support sessions and student personal work; related to the acquisition of practical abilities (3.5 ECTS).

## ASSESSMENT SYSTEM

Continuous assessment consist in two exams:

- Exam 1: state and functional diagrams. PLC programming. Ladder programming.
- Exam2: a practical programming exercise will be done individually. Compulsory attendance is required to 80% of laboratory sessions and classes in Computer Classroom to take this exam.

The final exam consists in several practical exercises about modelling, programming and theoretical questions. It is required to obtain a minimum mark of 3 in this final exam in order to pass the subject.

% end-of-term-examination: 50

% of continuous assessment (assignments, laboratory, practicals...): 50
