

Academic Year: (2022 / 2023)

Review date: 28-04-2022

Department assigned to the subject: Statistics Department

Coordinating teacher: NOGALES MARTIN, FRANCISCO JAVIER

Type: Compulsory ECTS Credits : 3.0

Year : 1 Semester : 2

OBJECTIVES

Become familiar with different analytical tools, based on data, to make business decisions

Capacity to develop skills to analyze and find relationships between many variables/features

Know how to evaluate supervised-learning models

Develop skills to classify observations based on probabilistic learning and machine learning tools

Handle the R language for statistical-learning tools

DESCRIPTION OF CONTENTS: PROGRAMME

Introduction to Statistical Learning

Performance Evaluation of Learning Models

Bayesian Learning

Bayes Rule and Cost-Sensitive Learning

k-NN

Support Vector Machines

Decision Trees and Random Forests

Neural Networks

LEARNING ACTIVITIES AND METHODOLOGY

Lectures (50% of the sessions): the contents of the course will be introduced, explained and illustrated with examples. Teaching materials will be provided on Aula Global.

Computer Labs (50% of the sessions): Examples and cases studies with the R language.

ASSESSMENT SYSTEM

Midterm (homework) 50%, Final project 50%, with a minimum grade of 5 points over 10 in each assessment activity.

% end-of-term-examination:	0
% of continuous assessment (assignments, laboratory, practicals...):	100
