Advanced Regression and Prediction

Academic Year: (2022 / 2023) Review date: 19-05-2022

Department assigned to the subject: Statistics Department

Coordinating teacher: MEILAN VILA, ANDREA

Type: Electives ECTS Credits: 3.0

Year: 1 Semester: 2

OBJECTIVES

Become familiar with different analytical tools, based on data, to make business decisions

Capacity to develop skills to analyze and find relationships between many variables/features

Relax some of the assumptions in classical linear regression

Deal with the curse of dimensionality in high-dimensional problems

Acquire knowledge about the main tools in advanced predictive tools and handle the R language with those models

DESCRIPTION OF CONTENTS: PROGRAMME

- 1. Introduction.
- 1.1. Motivating examples.
- 1.2. Linear regression: a brief review.
- 1.3. Extensions of linear models.
- 2. Non-linear relationships.
- 2.1. Introduction.
- 2.2. Tranformations.
- 2.3. Interactions.
- 2.4. Polynomial regression.
- 2.5. Non-linear regression models.
- 3. Generalized regression models.
- 3.1. Introduction.
- 3.2. Model formulation and estimation.
- 3.3. Inference for model parameters.
- 3.4. Model selection.
- 3.5. Model diagnostics.
- 3.6. Extensions.
- 4. Regularization methods.
- 4.1. Introduction.
- 4.2. Ridge regression.
- 4.3. LASSO regression.
- 4.4. Elastic Net.
- 4.5. Selection of tuning parameters.
- 5. Dimension reduction methods.
- 5.1. Introduction.
- 5.2. Principal component regression.
- 5.3. Partial least squares.

- 6. Ensemble methods.
- 6.1. Introduction.
- 6.2. Boosting.
- 6.3. Bagging.
- 6.4. Stacking.

LEARNING ACTIVITIES AND METHODOLOGY

Lectures: the contents of the course will be introduced, explained and illustrated with examples. Teaching materials will be provided on Aula Global.

Computer Labs: Examples and cases studies with the R language.

ASSESSMENT SYSTEM

% end-of-term-examination:
% of continuous assessment (assignments, laboratory, practicals...):
50
Continuous evaluation through two tests (50%) and final exam (50%).
