uc3m Universidad Carlos III de Madrid

Control Engineering

Academic Year: (2022 / 2023) Review date: 03-05-2022

Department assigned to the subject: Systems Engineering and Automation Department

Coordinating teacher: ARMINGOL MORENO, JOSE MARIA

Type: Compulsory ECTS Credits: 6.0

Year: 3 Semester: 1

OBJECTIVES

By the end of this content area, students will be able to have:

- 1. a systematic understanding of the key aspects and concepts of their branch of engineering in control engineering;
- 2. coherent knowledge of their branch of engineering including some at the forefront of the branch in control engineering;
- 3. the ability to apply their knowledge and understanding of control engineering to identify, formulate and solve engineering problems using established methods;
- 4. the ability to apply their knowledge and understanding to develop and realise designs to meet defined and specified requirements;
- 5. an understanding of design methodologies, and an ability to use them.
- 6. workshop and laboratory skills.
- 7. the ability to select and use appropriate equipment, tools and methods;
- 8. the ability to combine theory and practice to solve control engineering problems;
- 9. an understanding of applicable techniques and methods in control engineering, and of their limitations.

DESCRIPTION OF CONTENTS: PROGRAMME

- 1. Laplace Transform.
- 2. Modelling of systems:
- 2.1 Linealization.
- 2.2 Diagram Blocks.
- 2.3 Transfer function.
- 3. Temporal analysis of systems:
- 3.1 Influence of poles and zero.
- 3.2 Response to standard signals.
- 3.3 Systems of first and second order.
- 4. Frequential analysis of systems:
- 4.1 Diagram of Bode.
- 4.2 Design of filters.
- 5. Introduction to control systems:
- 5.1 Architectures of control.
- 5.2 Precision.
- 5.3 Sensitivity to disturbances.
- 6. Temporary analysis of feedback systems:
- 6.1 Root Locus.
- 7. Frequential analysis of feedback systems:
- 7.1 Nyquist Diagram.
- 8. PID Controllers:
- 8.1 Temporary design of regulators PID.
- 8.2 Frequential design of regulators PID.
- 8.3 Empirical adjustment of regulators PID.

LEARNING ACTIVITIES AND METHODOLOGY

- Skillful classes, classes of resolution of doubts in reduced groups, individual presentations of the students, individual tutorials and personal work of the student; oriented to the theoretical knowledge acquisition (3 credits ECTS). - Practices of laboratory and individual classes of problems in reduced groups, individual tutorials and personal work of the student; oriented to the acquisition of practical abilities related to the program of the subject (3 credits ECTS).

ASSESSMENT SYSTEM

- Continuous evaluation (deliverables problems) 10%
- Compulsory Practices 10%
- 2 Midterms 15% and 15%
- Final exam 50%
- You will need to get at least a 4 on the final exam to pass the course.

50 % end-of-term-examination: % of continuous assessment (assigments, laboratory, practicals...): 50
