Control Engineering I

Academic Year: (2023 / 2024)   **Review date: 10-04-2023**

Department assigned to the subject: Systems Engineering and Automation Department

Coordinating teacher: ARMINGOL MORENO, JOSE MARIA

Type: Compulsory ECTS Credits : 6.0

Year : 3 Semester : 1

OBJECTIVES

By the end of this content area, students will be able to have:
1.   a systematic understanding of the key aspects and concepts of their branch of engineering in control engineering;
2.   coherent knowledge of their branch of engineering including some at the forefront of the branch in control engineering;
3.   the ability to apply their knowledge and understanding of control engineering to identify, formulate and solve engineering problems using established methods;
4.   the ability to apply their knowledge and understanding to develop and realise designs to meet defined and specified requirements;
5.   an understanding of design methodologies, and an ability to use them.
6.   workshop and laboratory skills.
7.   the ability to select and use appropriate equipment, tools and methods;
8.   the ability to combine theory and practice to solve control engineering problems;
9.   an understanding of applicable techniques and methods in control engineering, and of their limitations;

DESCRIPTION OF CONTENTS: PROGRAMME

1. Laplace Transform.
2. Modelling of systems:
  2.1 Linealization.
  2.2 Diagram Blocks.
  2.3 Transfer function.
3. Temporal analysis of systems:
  3.1 Influence of poles and zero.
  3.2 Response to standard signals.
  3.3 Systems of first and second order.
4. Frequential analysis of systems:
 4.1 Diagram of Bode.
 4.2 Design of filters.
5. Introduction to control systems:
  5.1 Architectures of control.
  5.2 Precision.
  5.3 Sensitivity to disturbances.
6. Temporary analysis of feedback systems:
  6.1 Root Locus.
7. Frequential analysis of feedback systems:
  7.1 Nyquist Diagram.
8. PID Controllers:
  8.1 Temporary design of regulators PID.
  8.2 Frequential design of regulators PID.
  8.3 Empirical adjustment of regulators PID.

LEARNING ACTIVITIES AND METHODOLOGY

- Skillful classes, classes of resolution of doubts in reduced groups, individual presentations of the students, individual tutorials and personal work of the student; oriented to the theoretical knowledge acquisition (3 credits ECTS).
- Practices of laboratory and individual classes of problems in reduced groups, individual tutorials and personal work of the student; oriented to the acquisition of practical abilities related to the program of

the subject (3 credits ECTS).

ASSESSMENT SYSTEM

- Continuous evaluation (deliverables problems) 10%
- Compulsory Practices 10%
- 2 Midterms 15% and 15%
- Final exam 50%
- You will need to get at least a 4 on the final exam to pass the course.

% end-of-term-examination: 50

% of continuous assessment (assigments, laboratory, practicals…):   50
