

Academic Year: (2023 / 2024)

Review date: 26-04-2023

Department assigned to the subject: Computer Science and Engineering Department

Coordinating teacher: SANCHIS DE MIGUEL, MARIA ARACELI

Type: Compulsory ECTS Credits : 6.0

Year : 3 Semester : 1

REQUIREMENTS (SUBJECTS THAT ARE ASSUMED TO BE KNOWN)

Programming
Algorithms and Data Structures

OBJECTIVES

The objective of this course is for the student to acquire the following competencies and learning outcomes:

1.- General and Basic Competencies:

CGB3 - Ability to understand and master the basic concepts of discrete mathematics, logic, algorithmic and computational complexity, and their application to solve engineering problems.

CGO9 - Ability to solve problems with initiative, decision making, autonomy and creativity. Ability to know how to communicate and transmit the knowledge, skills and abilities of the profession of Technical Engineer in Computer Science.

CB1 - That the students have demonstrated to possess and understand knowledge in an area of study that starts from the basis of general secondary education, and is usually at a level that, although it is supported by advanced textbooks, also includes some aspects that involve knowledge from the forefront of their field of study.

CB3 - That students have the ability to gather and interpret relevant data (usually within their area of study) to make judgments that include reflection on relevant social, scientific or ethical issues.

CB5 - That students have developed those learning skills necessary to undertake further studies with a high degree of autonomy.

2. Specific competences:

CECRI5 - Knowledge, administration and maintenance of computer systems, services and applications.

CECRI6 - Knowledge and application of the basic algorithmic procedures of computer technologies to design solutions to problems, analyzing the suitability and complexity of the proposed algorithms.

CECRI15 - Knowledge and application of the fundamental principles and basic techniques of intelligent systems and their practical application.

3. Learning outcomes:

R1 Knowledge and understanding: have basic knowledge and understanding of the scientific and technological foundations of Computer Engineering, as well as a specific knowledge of computer science, computer engineering and information systems.

R5 Engineering Applications: Graduates will be able to apply their knowledge and understanding to solve problems, conduct research, and design devices or processes in the field of Computer Engineering according to criteria of cost, quality, safety, efficiency, environmental friendliness, and ethical implications. These skills include knowledge, use and limitations of computer systems, process engineering, computer architectures, computational models, equipment, practical work, technical literature and information sources.

DESCRIPTION OF CONTENTS: PROGRAMME**1.Introduction to the theory of automata and formal languages.**

- 1.1. Why study Automata Theory. History and Origins
- 1.2. Relationship with others Areas of Knowledge
- 1.3. Machines, Languages and Algorithms.

2.- Automata Theory

- 2.1 Introduction and Definitions.
- 2.2 Mathematical model of an automaton
- 2.3 Automata and algorithms.
- 2.4 Discrete, continuous, and hybrid automata. Classes of automata.

3. Finite Automata

- 3.1 Definition and Representation of Deterministic Finite Automata (DFA)
- 3.2. DFA as Recognition Device
- 3.3. Equivalence and Minimization of DFA
- 3.4. Theorems of DFA
- 3.5. Definition and Representation of Nondeterministic Finite Automata (NFA)
- 3.6. The Language of a NFA
- 3.7. Equivalence of DFA and NFA

4. Languages and Formal Grammars.

- 4.1. Operations with Words. Operations with Languages. Derivations.
- 4.2 Concept of Grammar. Formal Grammar.
- 4.3. Chomsky Hierarchy and Equivalent Grammar
- 4.4 Context-Free Grammar
- 4.5. Language of a Context-Free Grammar. Parse Tree
- 4.6. Well-Formed Grammar
- 4.7. Chomsky Normal Form. Greibach Normal Form

5. Regular Languages.

- 5.1. Definition of Regular Languages
- 5.2. DFA for a Regular Grammar
- 5.3. Equivalence of Regular Expressions
- 5.4. Kleene's Theorem
- 5.5. Characteristic equations
- 5.6. Synthesis Problem: Recursive Algorithm
- 5.7. Derivatives of Regular Expressions

6. Pushdown Automata.

- 6.1. Definition of Pushdown Automata (PDA).
- 6.2. Transitions, Movement and Instantaneous Description in PDA.
- 6.3. Acceptance by Empty Stack. Acceptance by Final State.
- 6.4. Language Accepted by a PDA.
Equivalence of PDA by Empty Stack and PDA by Final State.
- 6.5. From Context-Free Grammar to Push-Down Automata.
- 6.6. From Pushdown Automata to Context-Free Grammar.

7. Turing Machine.

- 5.1. Definition of Turing Machine.
- 5.2. Variations of Turing Machine.
- 5.3. Universal Turing Machine.

8. Compilers

- 8.1. Syntactic Analysis
- 8.2. Code generation

LEARNING ACTIVITIES AND METHODOLOGY

THEORETICAL-PRACTICAL CLASSES (theoretical content): 3.5 ECTS.

The knowledge to be acquired by the students will be presented. They will receive the class notes and will have basic reference texts to facilitate the follow-up of the classes and the development of the subsequent work. Exercises will be solved by the student that will serve as self-evaluation and to acquire the necessary skills. Classes of problems, in which the problems proposed to the students will be developed and discussed.

WORKSHOPS AND/OR LABORATORY PRACTICES. 1.5 ECTS.

Developed with or without the presence of the teacher, they aim to complete and integrate the development of all the specific and transversal competences, in the resolution of two practical cases where the approach to the problem, the choice of the resolution method, the results obtained and their interpretation are well documented.

FINAL EXAM. 0,5 ECTS

The knowledge, skills and abilities acquired throughout the course will be globally assessed.

TUTORIALS. 0,5 ECTS

Individualized assistance (individual tutorials) or in group (collective tutorials) to the students by the professor.

ASSESSMENT SYSTEM

The evaluation will consist in continuous assessment and a final exam.

The aim of continuous assessment is to help the students keep track of their learning progress, obtaining continuous feedback about the competences acquired during the semester. This way, mid-term exams and practices are intended to be both learning and evaluation activities.

The aim of the final exam is to assess the extent to which the students have acquired the cognitive and procedural competences.

The continuous assessment will sum up 50% of the final grade. The continuous assessment will consist of:

- 2-3 mid-term exams (test questions, short questions and problems), and
- Four practical assignments using JFLAP software tool (<http://www.cs.duke.edu/csed/jflap/>).

Each mid-term exams will sum up 12% of the final grade (or 18% in the case of 2) and the practical assessments 14% of the final grade.

The final exam (50 % of grade) will consist in theoretical questions as well as practical exercises.

More than 4 points in the final exam will be required to sum continuous assessment.

% end-of-term-examination:	50
% of continuous assessment (assignments, laboratory, practicals...):	50
