development. 5. Migration and development. 6. Peace-building. 7. Indigenous peoples. 8. Afro-descendant population. Lesson 12. The new aid architecture. 1. The aid effectiveness agenda. 2. Progress and challenges on the agenda. 3. The DAC process of aid modernization.

LEARNING ACTIVITIES AND METHODOLOGY

The methodology to be used intends to follow the Bologna model spirit, of continuous evaluation, in which the theoretical knowledge of the master classes are perfected and deepen with the more practical aspects developed in small groups.

The tutoring system will be the own system of the University.

Training activities will be those of the master and the small groups, in which various teaching techniques will be used. Techniques such as directed readings, workshops, debates may be used together with the case study method. Mass media products, specialized videos, websites of international organizations, States and non-governmental organizations may be included.

The chronogram will be applied with flexibility and, in any case, will be adapted to teaching evolution and the training needs identified by the teacher in charge and coordinator of the subject.

ASSESSMENT SYSTEM

The knowledge will be evaluated through the active participation of the students, the control of readings, the completion of works, the execution of exercises and case studies, and the participation in workshops. Public exhibitions will be held by working groups. During the four months there will be two test exams.

Each teacher will set a mandatory minimum number of training activities required to approve the continuous evaluation.

There will be a mandatory final theoretical exam that will include 4 questions of the program, of which the student will choose three. The duration of the exam will be two hour.

The mark required to pass the final theoretical exam will be 4 points. The student who does not get these four points will not approve the course.

Extraordinary call

The responsible professor for the ordinary call will establish an extraordinary exam according to the same requirements applied for the final examen assessment in the ordinary call. The percentage value of the extraordinary exam will be 100% of the final grade.

% end-of-term-examination:	60
% of continuous assessment (assignments, laboratory, practicals...):	40
