Simulation and Resampling

Academic Year: (2023 / 2024)

Review date: 22/07/2023 14:00:46

Department assigned to the subject: Statistics Department

Coordinating teacher: MARIN DIAZARAQUE, JUAN MIGUEL

Type: Electives ECTS Credits : 3.0

Year : 1 Semester : 2

REQUIREMENTS (SUBJECTS THAT ARE ASSUMED TO BE KNOWN)

Probability Statistical Inference Programming in R

OBJECTIVES

- The student will acquire the following knowledge:
- 1. Proficiency of Monte Carlo simulation techniques.
- 2. Proficiency of simulation techniques for random variables and vectors.
- 3. Proficiency of discrete event simulation techniques.
- 4. Knowledge of variance reduction techniques and MCMC.
- 5. Proficiency of bootstrap resampling techniques for complex environments and data.

DESCRIPTION OF CONTENTS: PROGRAMME

- 1. Introduction to Monte Carlo techniques
- 2. Simulating random variables and vectos
- 3. Discrete event simulation
- 4. Variance reduction and MCMC
- 5. Introduction to the bootstrap
- 6. Bootstrap for two samples and complicated data structures
- 7. Bootstrap-based inference

LEARNING ACTIVITIES AND METHODOLOGY

The classes consist of a mixture of presentations on the fundamental concepts of the subject and the presentation of practical cases through the use of software. The statistical language R is preferably used. Students are expected to bring their own laptops to experiment with the code during the lectures.

- * Training activities
- AF1: Theoretical lesson.
- AF2: Practical lesson.
- AF5: Tutorials.
- AF6: Group work.
- AF7: Individual work.
- AF8: On-site evaluation tests.
- * Teaching methodologies

- MD1: Class lectures by the professor with the support of computer and audiovisual media, in which the main concepts of the subject are developed and the bibliography is provided to complement the students' learning.

- MD2: Critical reading of texts recommended by the professor of the subject: press articles, reports, manuals and/or academic articles, either for later discussion in class, or to expand and consolidate the

knowledge of the subject.

- MD3: Resolution of practical cases, problems, etc. posed by the teacher individually or in groups.

- MD4: Presentation and discussion in class, under the moderation of the professor of topics related to the content of the subject, as well as case studies.

- MD5: Preparation of papers and reports individually or in groups.

ASSESSMENT SYSTEM

% end-of-term-examination/test:	0
% of continuous assessment (assigments, laboratory, practicals):	100

SE2 Group or individual take-home asignments: 100%

- Simulation project: 40%

- Resampling project: 30%
- Classroom work: 30%

There is no final exam.

The extraordinary evaluation will be in terms of a Simulation project (40%) and a Resampling project (30%), with a total weight of 70% of the final grade.
