LEARNING ACTIVITIES AND METHODOLOGY

In this course are remarked the economic aspects of the fiscal system (the effects of the taxes in the behaviour and wellness of the citizens) and the evaluation of the different taxes from the point of view of the economic efficacy and the distributive equity. The course following requires the reading of different specialized papers (but affordables for a wide range of students with basic knowledge of economics) and the use of the most frequent simulation economic models.

Students will develop (organized in working groups) expositions about the Spanish Income Tax IRPF with the purpose of study the specific treatment included in the present legislation for the different incomes.

The methodology of the course will combine keynote address lessons in the class, working in groups and individual activities.

ASSESSMENT SYSTEM

The assessment will include a final examination (60 %) and a continuous assessment system (40 %).

The continuous assessment system will include the development of different exercises delivered by the students each week during the course (20 %) and the training of materials for the exposition by working groups of different aspects of the Spanish Income Tax IRPF.

% end-of-term-examination:	60
% of continuous assessment (assignments, laboratory, practicals...):	40
