

Academic Year: ( 2023 / 2024 )

Review date: 24-03-2023

Department assigned to the subject: Economics Department

Coordinating teacher: ESCANCIANO REYERO, JUAN CARLOS

Type: Compulsory ECTS Credits : 9.0

Year : 1 Semester : 1

**REQUIREMENTS (SUBJECTS THAT ARE ASSUMED TO BE KNOWN)**

Calculus, Linear Algebra and Statistics at B.Sc. in Economics level.

**OBJECTIVES**

This course provides the probability and statistics background for Econometrics II as well as the rest of quantitative courses taught in our Ph.D. program. The course assumes that the student has knowledge of Calculus, Algebra and Statistics needed for standard Econometrics courses at a Bachelor level. At the end of the course the student is expected to acquire the probability and statistical tools needed to read research articles in professional journals.

**DESCRIPTION OF CONTENTS: PROGRAMME****PART I: PROBABILITY THEORY**

- 1.- Probability spaces and random elements.
- 2.- Integration and differentiation.
- 3.- Distribution and its characteristics.
- 4.- Conditional expectations.
- 5.- Asymptotic theorems.

**PART II: STATISTICAL INFERENCE**

- 1.- Population, sample and moments.
- 2.- Statistical inference.
- 3.- Asymptotic criteria and inference.
- 4.- Estimation in parametric models.
- 5.- Hypotheses tests.

**PART III: LINEAR MODEL**

1. Modeling linear and nonlinear relations.
2. Finite sample inferences using OLS and ML.
3. Asymptotic inferences.
4. Identification and misspecification.
5. GMM/IV estimation.

## LEARNING ACTIVITIES AND METHODOLOGY

### Training activities

Lectures  
Practical classes  
Problem Sets  
Individual student work  
Tutorials

### Teaching methodology

Exhibitions in class with teacher support and audiovisual media, in which the main concepts of matter are developed and the literature is provided to supplement student learning.

Practical classes with resolution of exercises and problems that illustrate the theory and allow to study particular cases and small extensions.

Problem sets to solve at home individually, helping to systematize the study of the subject and to revise fundamental concepts.

## ASSESSMENT SYSTEM

1 quiz + 4 sets of problems to be handled in the day of the quiz & exam: 45%

Final exam: 55%

<b>% end-of-term-examination:</b>	55
<b>% of continuous assessment (assignments, laboratory, practicals...):</b>	45
