

Statistical Learning

Academic Year: (2024 / 2025)

Review date: 26-04-2024

Department assigned to the subject: Statistics Department

Coordinating teacher: DELGADO GOMEZ, DAVID

Type: Compulsory ECTS Credits : 3.0

Year : 1 Semester : 2

OBJECTIVES

Become familiar with different analytical tools, based on data, to make business decisions

Capacity to develop skills to analyze and find relationships between many variables/features

Know how to evaluate supervised-learning models

Develop skills to classify observations based on probabilistic learning and machine learning tools

Handle the R language for statistical-learning tools

DESCRIPTION OF CONTENTS: PROGRAMME

1. Principal Component Analysis (PCA)
2. Multivariate Normal Distribution
3. Discriminant Analysis
4. Supervised Learning: k-Nearest Neighbors, Decision Trees, and Random Forests
5. Bias-Variance Tradeoff and Cross-Validation
6. Support Vector Machines (SVM)
7. Unsupervised Learning: K-means and Expectation-Maximization (EM) algorithm for Gaussian Mixture Models

LEARNING ACTIVITIES AND METHODOLOGY

Lectures (50% of the sessions): the contents of the course will be introduced, explained and illustrated with examples. Teaching materials will be provided on Aula Global.

Computer Labs (50% of the sessions): Examples and cases studies with the R language.

ASSESSMENT SYSTEM

% end-of-term-examination:	40
% of continuous assessment (assignments, laboratory, practicals...):	60

Group assignments and presentations in class (60%)

Final test (40%)

A score of 5 out of 10 on the final exam is required to pass the subject.

Extraordinary evaluation similar to the ordinary evaluation.
