

Programming

Academic Year: (2024 / 2025)

Review date: 06-09-2024

Department assigned to the subject: Computer Science and Engineering Department

Coordinating teacher: VELASCO DE DIEGO, MANUEL

Type: Basic Core ECTS Credits : 6.0

Year : 1 Semester : 1

Branch of knowledge: Engineering and Architecture

OBJECTIVES

When passing this subject, students will be able to:

1. Have basic knowledge and comprehension about computer systems and programming applied to Engineering
2. Be aware of the multidisciplinary context of Industrial Engineering
3. Identify, formulate and solve engineering problems using computing methods
4. Combine theory and practice to solve engineering problems using computing methods, programming methods

DESCRIPTION OF CONTENTS: PROGRAMME

- 1 Basic Concepts
 - 1.1 Algorithm
 - 1.2 Program
 - 1.3 Pseudocode
 - 1.4 Structured Programming
- 2 C Language Programming
 - 2.1 C Syntax
 - a Parts of a C Program
 - b Libraries
 - c #include, #define Directives
 - d Constants
 - e main() function
 - 2.2 Data Types
 - 2.3 Flow Control
 - 2.4 Input/Output
 - 2.5 Conditional Statements
 - 2.6 Iterative Statements
 - 2.7 Functions
 - a Declaration
 - b Definition
 - c Parameters
 - d Reference and Value Parameters
- 3 Approach to C++
 - 3.1 Object-Oriented Programming
 - 3.2 vector class
 - 3.3 string class
 - 3.4 Classes and Objects
 - a Constructors
 - b Overloading
 - c Inheritance
- 4 Memory Management
 - a Pointers
 - b Static Memory

LEARNING ACTIVITIES AND METHODOLOGY

- Master lectures, reduced groups classes for resolution of doubts, students' presentations, individual tutorships and student's personal work; guided to the acquisition of theoretical knowledge (3 credits ECTS).
- Reduced groups for both laboratory practices and classes of problems, individual tutorships and student's personal work; guided to the acquisition of practical abilities related to the program of the subject (3 credits ECTS).

ASSESSMENT SYSTEM

% end-of-term-examination:	50
% of continuous assessment (assignments, laboratory, practicals...):	50

Continuous evaluation based on homework, participation during the classes and tests for the evaluation of abilities and knowledge

Theory accounts for the 75% of the grade

Practices account for the other 25%

It is necessary to pass both theory and practices to pass Programming

The continuous evaluation of the theory part consists of 2 exams:

- a) algorithmics: 20% of the total theory grade. No minimum grade required
- b) functions and vectors: 30% of the total theory grade. Minimum grade of 2.5 out of 10 required

The theory exam of the ordinary call is the remaining 50%. Minimum grade of 2.5 out of 10 required

Students can take the ordinary exam without taking the continuous assessment. In this case, this exam has a weight of 70% in the theoretical part of the subject
