

Academic Year: (2024 / 2025)

Review date: 29-05-2024

Department assigned to the subject: Economics Department

Coordinating teacher: FUSTER PEREZ, MARIA LUISA

Type: Compulsory ECTS Credits : 6.0

Year : 2 Semester : 1

OBJECTIVES

The goal of this class is to learn the theory of international economics and apply it to real problems of the world economy.

As for the learning goals, by the end of the course students should be able to:

- Understand the classical models of international trade (Ricardo and Heckscher-Ohlin).
- Analyze the gains from trade and their redistributive effects.
- International Macroeconomics: Understand the relation between international trade, migration, and capital flows.
- International Macroeconomics: Understand the concepts of trade deficit and trade surplus, and understand its relation to investment and savings.
- International Macroeconomics: Apply tools to discuss the problems inside the EU and the current account deficit.

In terms of specific skills, by the end of the course students should be able to:

- Solve trade models graphically and analytically.
- Determine prices, trade volumes, and welfare effects of trade liberalization.
- Calculate costs and benefits of trade liberalization and protectionism for different groups.
- Calculate the costs and benefits of liberalizing migration.
- Solve case studies related to globalization.
- Analyze graphically the effects of monetary and fiscal policy under different regimes.

In terms of competences, the course focuses on:

- The capacity to solve complex problems graphically and analytically.
- The capacity to relate economic theory to real the real problems of the global economy.

In terms of attitude, the course expects students to

- Develop a critical, open and informed opinion in the debate on the effects of globalization.
- Develop a scientific approach in the challenging task of analyzing complex real world problems.

DESCRIPTION OF CONTENTS: PROGRAMME

The course focuses on the theory of international economics. The first part covers international trade. The most important topics covered are: patterns of trade and specialization (from the classical models --- Ricardo and Heckscher-Ohlin ---); gains from trade and effects of international trade on income distribution. Along the way, several important real world problems will be discussed, such as the effects of offshoring on wages.

In the international macroeconomics part, the most important topics are: current account; exchange rates; relationship between interest rates and inflation and monetary and fiscal policy under different regimes. These tools will be useful to understand current policy issues as European Union or the financial crisis.

LEARNING ACTIVITIES AND METHODOLOGY

The course consists of theoretical lectures and sessions of problem solving. Students are expected to solve and hand in problem sets. Problem solving is essential to acquiring the knowledge and skills required by this course.

ASSESSMENT SYSTEM

% end-of-term-examination:	50
% of continuous assessment (assignments, laboratory, practicals...):	50

The final grade consists of problem sets and class participation (10%), 3 quizzes, and one midterm (30%) and one final exam (50%). In order to pass the course the grade of the final exam has to be at least 40%.

Extraordinary call (make up):

The grade will be the maximum between the grade of the make up exam (100%) and the average of the grade of the make up exam and the continuous evaluation (50% make up exam+50% continuous evaluation).
