

**DENOMINACIÓN ASIGNATURA: Circuitos Magnéticos y Transformadores**

**GRADO:** Ingeniería Eléctrica

**CURSO:** Tercero

**CUATRIMESTRE:** 1

*La asignatura tiene 29 sesiones que se distribuyen a lo largo de 14 semanas. Los laboratorios pueden situarse en cualquiera de estas ellas. Semanalmente el alumnos tendrá dos sesiones, excepto en un caso que serán tres.*

| PLANIFICACIÓN SEMANAL DE LA ASIGNATURA |         |   |                     |         |   |                |                            |                       |                                       |

| 1                                      | 1       | Part 1: Introduction to the subject. Review of basic concepts of electricity and magnetism.                   |                     | 9 sep   | No  | NO             |                            | 1,66                  |                                       |
| 1                                      | 2       | Part 2: Transformer constitution. Windings. Magnetic core. Dielectrics. Cooling. Maintenance.                 | 10 sep              |         | No  | No             |                            | 1,66                  | 7                                     |
| 2                                      | 3       | Part 1 Problems: Calculation of flux. Calculation of self and mutual inductances.                             |                     | 16 sep  | No  | Optional<br>T1 |                            | 1,66                  |                                       |
| 2                                      | 4       | Part 3: No load operation of single-phase transformers. On load operation of ideal single-phase transformers. | 17 sep              |         | No  | No             |                            | 1,66                  | 7                                     |
| 3                                      | 5       | Laboratory 1: Iron core inductances   |                     | 23 sep  | Lab 1.0S01  | No             |                            | 1,66                  | 7                                     |

|    |    |   |        |        |                    |                                |  |      |  |
|----|----|---|--------|--------|--------------------|--------------------------------|--|------|--|
| 3  | 6  | Part 3: On load operation of real Transformers. Equivalent circuits.  | 24 sep |        | No                 | Global. T1 y T2 or optional T2 |  | 1,66 |  |
| 4  | 7  | Part 3 Problems: Obtainig no load current of single-phase Transformers  |        | 30 sep | No                 | Optional T3P1                  |  | 1,66 |  |
| 4  | 8  | Part 3 (Profesor Ángel Ramos): Applications of transformer equivalent circuit: Obtaining voltage regulation and efficiency. | 1 oct  |        | No                 | No                             |  | 1,66 |  |
| 5  | 9  | Part 3 Problems: Variation of core losses with grid frequency and voltage   |        | 7 oct  | No                 | Optional T3P2                  |  | 1,66 |  |
| 5  | 10 | Part 3: Shortcircuit currents in transformers. Inrush currents.   | 8 oct  |        | No                 | No                             |  | 1,66 |  |
| 6  | 11 | Part 4 Problems: Three phase transformer banks from single-phase transformers.  |        | 14 oct | No                 | No                             |  | 1,66 |  |
| 6  | 12 | Problem Exam (Parts 1 and 3)  | 15 oct |        | No                 | Problems                       |  | 1,66 |  |
| 7  | 13 | Part 4: Three-phase transformers. Vector groups. Parallel operation of Transformers.  |        | 21 oct | No                 | Global T3 or optional T3P3     |  | 1,66 |  |
| 7  | 14 | Part 4: No no load operation of three-phase transformers.   | 22 oct |        | No                 | No                             |  | 1,66 |  |
| 8  | 15 | Laboratory 2: Phase angles. Parallel operation of three-phase Transformers.   |        | 28 oct | Lab 1.0S01         | No                             |  | 1,66 |  |
| 8  | 16 | Part 4: Three phase Transformers under balanced load  | 29 oct |        |                    |                                |  | 1,66 |  |
| 9  | 17 | Part 4 Problems: Obtaining the transformer equivalent circuit from no load and short circuit tests.                         |        | 4 nov  |                    |                                |  | 1,66 |  |
| 9  | 18 | Part 4: Unbalanced loads in three phase Transformers.   | 5 nov  |        |                    | No                             |  | 1,66 |  |
| 10 | 19 | Laboratory 3: No load and short circuit tests   |        | 11 nov | Laboratorio 1.0S01 | No                             |  | 1,66 |  |
| 10 | 20 | Part 4: Tertiary windings. Three winding Transformers   | 12 nov |        |                    |                                |  | 1,66 |  |
| 11 | 21 | Part 4 Problema: Efficiency and voltage regulation in Transformers.   |        | 18 nov |                    | Optional T4P1                  |  | 1,66 |  |
| 11 | 22 | Part 4: Yz Transformers. Tap changers.  | 19 nov |        |                    |                                |  | 1,66 |  |

|   |    |  |        |        |                    |                   |                   |              |    |  |
|---|----|--|--------|--------|--------------------|-------------------|-------------------|--------------|----|--|
| 12  | 23 | Part 4 Problems: Parallel operation of three phase transformers. Phasor diagram.   |        | 25 nov |                    | Optional T4P2     |                   | 1,66         |    |  |
| 12  | 24 | Part 4 problems: Systems with multiple transformers  | 26 nov |        |                    |                   |                   | 1,66         | 8  |  |
| 13  | 25 | Laboratory 4: Zero sequence impedance test   |        | 2 dic  | Laboratorio 1.0S01 | No                |                   | 1,66         |    |  |
| 13  | 26 | Part 4 problems: Transformer fed from two substations  | 3 dic  |        |                    |                   |                   | 1,66         | 8  |  |
| 14  | 27 | Part 4: (Profesor Angel Ramos) Autotransformers. Ventages and disadvantages of the various group connections. Life cycle in a power transformer. |        | 9 dic  |                    |                   |                   | 1,66         |    |  |
| 14  | 28 | Part 4 problem: Three-winding transformers. Examination of theory of part 4  | 10 dic |        |                    | Global T4 or T4P3 |                   | 1,66         |    |  |
|   |    |  |        |        |                    |                   | <b>Subtotal 1</b> | <b>46,5</b>  | 10 |  |
| <b>Total 1 (Horas presenciales y de trabajo del alumno entre las semanas 1-14)</b>  |    |  |        |        |                    |                   |                   | <b>149,5</b> |    |  |
| 15  |    | Examination of part 4 problems.  |        | 17 dic |                    | Problems          |                   | 2            | 10 |  |
