# **MASTER IN ECONOMICS**

## Course 2017/2018

## MATHEMATICS

## **DESCRIPTION OF CONTENTS: PROGRAMME**

### 1. Linear Algebra

- 1.1. Matrices and vectors. Rank of a vector
- 1.2. Determinants
- 1.3. Inverse matrices
- 1.4. Linear systems
- 1.5. Equivalent and similar matrices
- 1.6. Eigenvalues and eigenvectors. Diagonalization
- 1.7. Quadratic forms

Bibliography: Chapter 1 of [4]. Sections 1.3 and 1.5 of [3]

## 2. The Euclidean Space R<sup>n</sup>

- 2.1. Scalar product of two vectors. Norm of a vector
- 2.2. Topology in R<sup>n</sup>: Open and closed balls. Interior and closure points of a set. Open and closed sets. Bounded and compact sets.
- 2.3. Limit of a function. Iterated limits
- 2.4. Continuous functions
- 2.5. Weierstrass Theorem

Bibliography: Sections 1.1, 1.2. Subsection 1.4.1 and Chapter 3 of [3].

## 3. Differential Calculus of Several Variables. Part I

- 3.1. Directional derivatives. Partial derivatives. Jacobian matrix. Gradient
- 3.2. Derivability and differentiability of a function
- 3.3. Geometric interpretation of real differentiable functions. Tangent plane. Direction of maximum increasing/decreasing of a function
- 3.4. Chain rule

Bibliography: Sections 2.1 and 2.9 of [4]. Subsections 1.4.2, 1.4.3 and 1.4.4 of [3].

## 4. Differential Calculus of Several Variables. Part II

- 4.1. Second order derivatives. Hessian matrix
- 4.2. The implicit function theorem
- 4.3. Taylor approximation

Bibliography: Sections 2.6 and 2.7 of [4]. Subsections 1.4.5 and 1.6.3 of [3].

## 5. Unconstrained Optimization Problems and Convex Analysis

- 5.1. Unconstrained optimization problems. Relative extrema
- 5.2. Convex and concave functions. Minimizing a convex function

**Bibliography:** Sections 2.2, 2.3, 2.4, 2.5 of [4]. Subsections 1.2.9 and 1.6.1, and Sections 7.1, 7.2 of [3]. Sections 2.1-2.6 and Chapter 3 of [2]. Chapter 2 of [1]

### 6. Constrained Optimization Problems

6.1. Constrained optimization problems

- 6.1.1. Linear programming. The Simplex Method
- 6.1.2. Nonlinear programming. Optimization problems with equality constraints. The Lagrange Multiplier Method. Optimization problems with inequality constraints. The Kuhn-Tucker Theorem

**Bibliography:** Chapter 3 of [4], Chapters 2-7 of [3]. Section 2.7 and Chapter 4 of [2]. Chapter 3 of [1]

#### 7. Difference equations

- 7.1. Difference equations. Concept and classification
- 7.2. First order linear difference equations: Solution and stability. Applications
- 7.3. Simple and compound interest
- 7.4. Introduction to second order linear difference equations

Bibliography: Chapters 5, 6 and 11 of [4].
